1. Use Case Title: UC007 Withdraw Funds (Primary) & SC003 Manage Verified Accounts (Supporting)

2. Full Scenario Narrative:
The user accesses the "Withdraw" section of the Etiqa+ app to transfer funds from their eWallet to a personal bank account. To ensure security and prevent "Man-in-the-Middle" attacks (MUC03), the system restricts transfers strictly to pre-verified bank accounts (SC003). The user selects a verified bank, enters an amount, reviews the transaction to ensure the destination account is correct, and must authenticate via **6-digit PIN or Biometrics**. The system provides real-time feedback on the transaction status.

3. Flows & Screen Justification:

- **Normal Flow (Success Path):**
    1. User taps the **"Withdraw"** button on the Dashboard.
        - *Screen Justification:* Placed in "Quick Actions" for easy access.
    2.
    3. System displays the **"Payment Methods"** list showing verified accounts.
    4. User selects **"Maybank Savings (**9018)"** and taps **"Confirm Selection"**.
    5. System displays the "Withdraw Funds" input screen.
    6. User enters amount **"RM 9.00"** and taps **"Confirm & Withdraw"**.
    7. System displays the **"Review Transfer"** screen.
        - *Security Note:* This screen allows the user to verify the account number (MUC03 mitigation).
    8. User taps **"Confirm & Withdraw"**.
    9. System prompts for **Security PIN** or **Biometrics**.
    10. User enters valid PIN or scans Finger ID.
    11. System displays **"Processing Transaction..."** with a secure connection indicator.
    12. System displays **"Withdrawal Successful"** receipt with Reference ID.

- **Alternative Flow (First-Time User / Add New Account):**
    1. On the "Payment Methods" screen, the list is empty.
    2. User taps **"Add New Bank Account"**.
    3. User fills in Bank Name and Account Number, then taps **"Verify & Save"**.
    4. System prompts for **Biometric Authentication (Finger ID)**.
    5. System displays "Connecting to Bank Securely..." (API Validation).
    6. System displays **"Identity Verified"** success screen.
    7. User taps **"Withdraw Funds Now"** to return to the main flow.

- **Exception Flow (Transaction Failed):**
    1. Scenario: The bank API times out or the user cancels during processing.
    2. System stops the "Processing" animation.
    3. System displays **"Transaction Failed"** screen (Red Status).
    4. User is prompted to **"Try Again"** or contact support.
