SCSE2123 – SOFTWARE REQUIREMENTS ENGINEERING

SEMESTER III, SESSION 2025/2026

REQUIREMENTS CLASSIFICATION ACTIVITY

Lecturer: Dr. Radziah Binti Mohamad

Section: 02

Group: 09

NAME	MATRIC NO
TAN CHOON DA	A24CS0301
LEE MING DA	A24CS0249
GAN RUI EN	A24CS0317
MOHAMMED ALSAKKAF	A23CS4026

Kano Model Classification	Feature / Requirement	Justification
Must-be	User authentication using official UTM email and staff/student ID.	Users expect secure login using official UTM credentials. It is basic for trust and access control.The system is considered incomplete or untrustworthy without it.
	Secure payment processing (QR code/NFC) with balance updates.	It is a basic functionality of any e-wallet, as users expect their payments to be processed accurately and reflected in their balance immediately.
	Data security and encryption for passwords and transactions.	Sensitive information such as passwords, balance, and transaction details must be encrypted.
	Compliance with UTM IT policies and Malaysia's Personal Data Protection Act 2010.	It is mandatory for the system to comply with legal and institutional requirements to ensure proper operation within university and national standards.
Performance	Fast transaction response and low latency	The faster the system responds, the more satisfied users are, performance directly impacts user experience.
	Reliable system uptime and automatic recovery from failures	Consistent availability increases user satisfaction, downtime decreases trust.
	Scalability to support high user load	During busy periods such as lunch hours or class breaks, many users may access the system simultaneously. The system must handle large volumes of transactions without slowing down or crashing.
	Support for both English and Malay interfaces	Improves accessibility and inclusivity, satisfaction increases as more users can comfortably use the app.
Excitement	Integration with student/staff cards and campus access points	Users are delighted by additional convenience and automation.
	Notifications for transactions and low balance alert	Enhances user engagement and awareness.
	Attendance verification via QR/NFC for lecturers	Adds smart utility beyond payments, making the app more valuable and appealing.

	Digital ID access for library and labs	Provides additional functionality that surprises and pleases users beyond basic wallet functions.
	Expenses summarize and analysis	Monitors users expense behavior and offers valuable financial insights.
Indifferent	Operation limited to campus Wi-Fi and servers	Users may not notice or care as long as the system works.
	Use of open source or licensed software	This matters to developers and budget planners, not impact the users.
	The system shall include an optional dark/light theme toggle.	This feature does not strongly influence satisfaction or dissatisfaction for most.
Reverse	Mandatory app training sessions for users	Users might find forced training unnecessary for an intuitive app.
	Limited daily transaction value for each account	Limiting users to a fixed daily transaction value may reduce their satisfaction but can prevent scams and misuse.
