Project 1 Instruction

www.utm.my
innovative • entrepreneurial • global

univteknologimalaysia utm_my utmofficial

Task

i) Perform suitable elicitation techniques to gather the requirements from the identified sources

- Stakeholders - Interview, survey/questionnaires, workshop/brainstorming
- Documents - system archaeology, perspective-based reading, mind-maps
- Systems in operation - field observation, apprenticing, prototyping

ii) Analyse the stakeholders intention towards system property (functional, quality) and development project (constraints)

- Draw Goal model to represent the high-level (strategic concerns) and low-level objectives (technical, security, sustainability, and intelligent software elements)

iii) Analyse the flow of business processes that cross-functional with the related stakeholders for As-Is system.

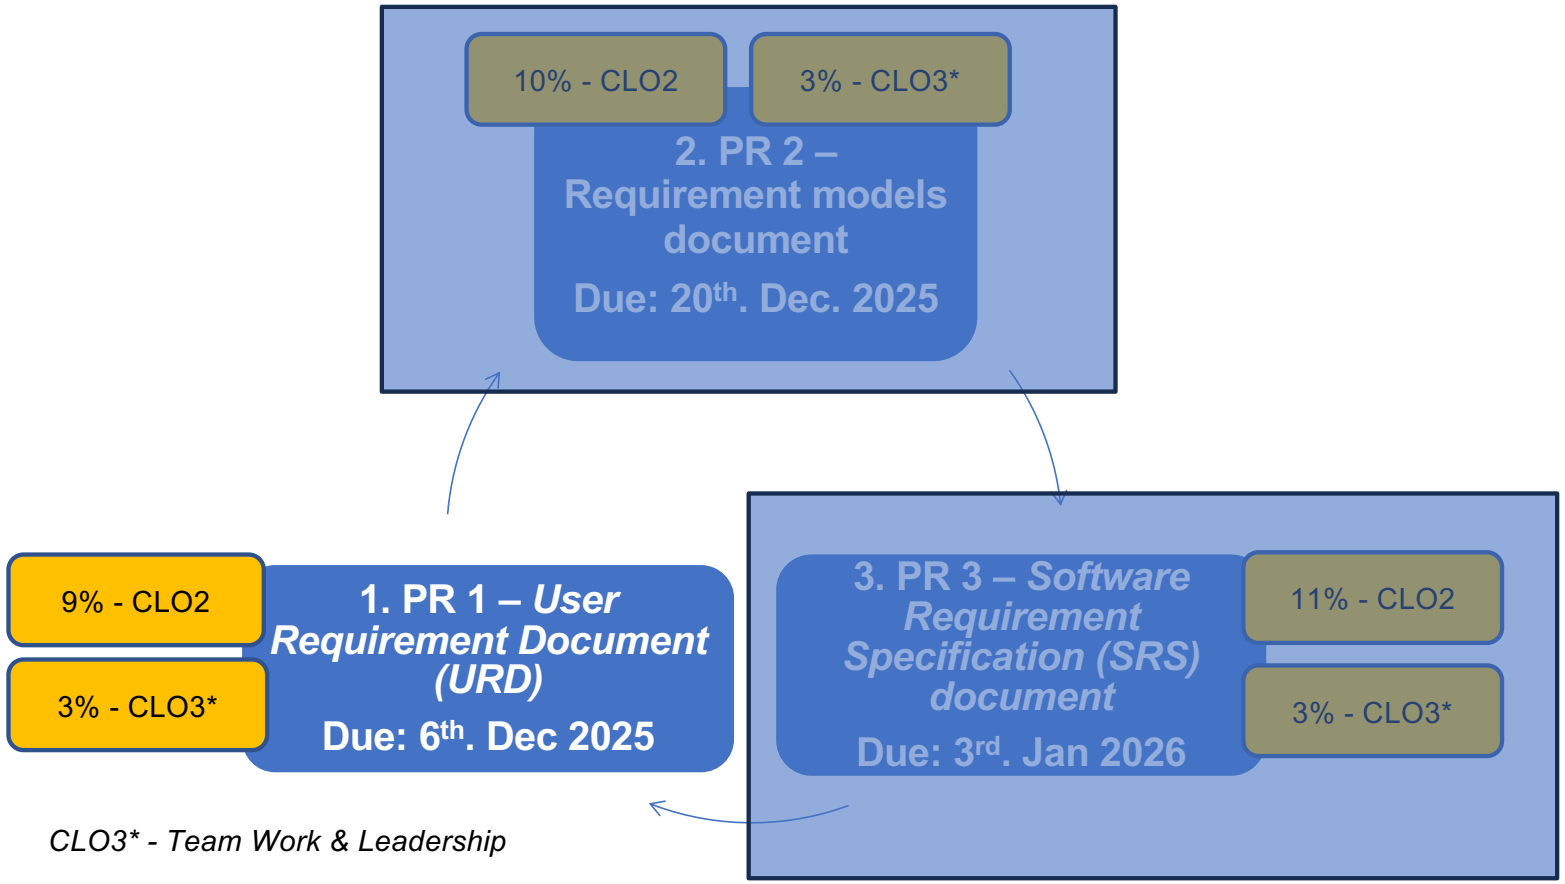

- Draw Swimlane diagram for each business process of As-Is system.

iv) Analyse the unsolved-problems and issues faced by the end-users of As-Is system.

v) Suggest the improvement processes for the analysed problems/issues
- Draw Swimlane diagram for each improvised business process of To-Be system.

vi) Specify all related business rules to the proposed process for To-Be system.

Project Timeline & Grading

CLO3 - Team Work & Leadership*

Deliverables

User Requirement Document (URD)

- Must use the URD Template given in the e-learning.
- Goal model & business process flow model (using horizontal Swimlane diagram)

Video presentation

- Each team will produce a 5–7 minute video presentation. Must use the provided template

The presentation must clearly demonstrate:

- Overview of the system context
- Elicitation summary
- Goal Model explanation
- Business Process (As-Is & To-Be)
- Reflection – Briefly discuss challenges faced and lessons learned during the elicitation and modeling process

Leadership

Using MyPeer app, rate team members and give feedback based leadership and teamworking.
