UTM UNIVERSITI TEKNOLOGI MALAYSIA

FACULTY OF COMPUTING
UTM Johor Bahru

SEMESTER II 2025/2026

SCSP3213 BUSINESS INTELLIGENCE

Lab Assignment 2 (5%)

For this section, you need to create a workbook in Tableau Desktop. Load the dataset *GooglePlayStore.xlsx* into your new workbook. **Solution for each question must be visualized at different worksheet and rename it based on question no**. (Example: Q1)

1. Create a **dual-axis chart** using **Review** and **Rating** measures by **Category**. Use bar graph to denote the review whereas line graph to denote the rating. Sort by Review in descending order. Determine the categories that have high review but low rating and state the value for the review and rating by completing Table 1.

Table 1

Category	Review	Rating

(5 marks)

2. Show the top 3 app based on reviews for **Android version 0.0.9**. Use a context filter for the Current Version field as a second filter by right clicking on the Current Version filter and select Add to context. (6 marks)

3. Create a **treemap chart** to visualize the number or installation based in genres. Add category information in the tooltip. Identify the genre and its category with the highest installation for paid status (4 marks)
4. Create a **set** of apps with rating **higher than 4.5**. Determine the **percentage** of apps that fall into this set. (6 marks)
5. Use the count measure to determine the number of records in the Social category for both free and paid status. (4 marks)
6. Which content rating category has the highest review? (3 marks)
7. Create a chart to sort categories based on percentage of installs. Determine the percentage of install for lifestyle category with rating of at least 5. (6 marks)
8. Change the data type for last update filed to date data type and create a chart to evaluate the monthly trend of number of app installation (used count measurement) from May 2010 until July 2018. Forecast the number of app installs for May 2019.

(6 marks)
