SEMESTER II 2025/2026

SCSP3213 BUSINESS INTELLIGENCE

LAB ASSIGNMENT 3

Name	:		**Marks** 20
Student ID	:		
Date	:		

KidsFlix is a streaming platform specializing in children's movies and educational content. Management would like to understand viewing patterns, popular content, and subscriber demographics to improve business decisions.

You have been provided with three datasets:

1. Movies.xlsx
2. Subscribers.xlsx
3. Viewership.xlsx

As a Business Intelligence analyst, you have been tasked with preparing the data, developing an appropriate data model, and creating interactive visualizations using Power BI. Using the dataset provided, perform the required data preparation and modeling tasks, and develop suitable Power BI visualizations to answer each of the following business questions.

Part A: Data Preparation and Data Modelling (10 Marks)

A1. Data Cleaning (5 Marks)

Using **Power Query**, perform the necessary data cleaning steps to improve data quality and ensure that the dataset is suitable for analysis and reporting.

Movies Table

Use the **Replace Values** feature in the **Transform** tab to replace null values in the **Studio** field with **"Unknown"**.

Subscribers Table

Use the **Replace Values** feature in the **Transform** tab to replace null values in the **Country** field with **"Unknown"**.

Viewership Table

1. Click the **Filter Arrow** (the small upside-down triangle) in the WatchHours column header and select **Remove Empty** to remove rows with null values .
2. Check the data type for WatchDate column is set to in Date format.
3. Add a new column named **Quarter** using the **Conditional Column** feature based on the **WatchDate** field with the following criteria:

Quarter	Criteria
Q1	If WatchDate is before 31/3/2025
Q2	If WatchDate is before 30/6/2025
Q3	If WatchDate is before 30/9/2025
Q4	Else

A2. Data Modelling (5 Marks)

1. Create relationships between:

- Movies
- Subscribers
- Viewership

Part B: Data Analysis (10 Marks)

1) Create a measure named **Total Views** in the **Viewership** table using the **COUNT** function to calculate the total number of views based on the **ViewID** field

2) Construct an appropriate visualization(in one worksheet) to answer the following business question :

a) Determine what is the total number of Watch Hours recorded?

b) Which Genre recorded the highest Total Watch Hours?

c) Which Country obtained the highest Total Views?

d) Which Quarter achieved the highest Total Views?

e) In Quarter 2, which country had the highest Total Views?
