Question 3

Not yet answered

Marked out of 6.00

The following table shows three processes **P1, P2** and **P3** run concurrently in a Unix system. Assume that all the flags, A, B, and C are initially initialized to 0. There are TWO possible output (refer **Table A** and **Table B**) you need to complete both table. [6 marks]

P_0	P_1	P_2
wait(B) print ("B") signal(C)	signal(C) print ("A") signal(B)	wait(C) print ("C")

Output Table A [3 marks]

[Note: For column A, B and C, update the cells with value either **0** or **1**].

Process	A	B	C	Output
Initial	0	0	0	None
P1				
P0				
P2				

Output Table B [3marks]

[Note: For column A, B and C, update the cells with value either 0 or 1].

Process A	A	B	C	Output
Initial	0	0	0	None
P1				
P0				
P2
