Problem Solving 1: Software application and its features (5%)

Objective:

The goal of this assignment is to apply your understanding to identify real-world software examples that incorporate these features: **Security, Sustainability**, **Intelligent.** You will analyze how the selected software embodies these features and provide clear justifications for each feature, demonstrating your ability to apply theoretical knowledge to real-world scenarios. This is a group project and you have to do the project

---

Assignment Instructions:

1. Identify one real-world software example for each of the following categories:

    - Sustainable Software
    - Secure Software
    - Intelligent Software

2. For each software example:

    - Provide the name and a brief description of the software.
    - Identify and explain the key feature(s) that justify why the software belongs in the selected category.

3. Provide a clear justification for each feature identified.

    For example:

        - **Sustainable**: Explain how the software minimizes its environmental impact by optimizing resource usage, how it promotes social equity, or how it ensures long-term economic viability.
        - **Secure**: Explain how the software ensures confidentiality through encryption, maintains data integrity via hashing, or guarantees availability with redundancy.

- **Intelligent**: Describe how the software demonstrates intelligence through machine learning, adaptation, and decision-making processes

Rubric:

Assessment Criteria	Marks
1. Relevance and Clarity of Software Examples Appropriateness and clarity of the selected software for each category (sustainable, secure, intelligent).	10
2. Identification of Key Features Clear and accurate identification of relevant software features that align with each category.	12
3. Justification of Classification Logical and well-supported explanation of how and why the features support the assigned category.	18
4. Organization and Presentation Clear structure, formatting, and professional presentation of the content.	5
5. References and Citations Follow the APA style citation for the references.	5
Total	**50**
