SCSE2233 Software Design & Architecture — Final Exam

Q1(c) Model Answer: The FIVE Personality Dimensions (Big Five) (4 marks)

What the question wants (plain words)

Pick **TWO** of the five dimensions. For each one: **name it**, give a **one-line meaning**, then tell a **real example** of how you showed that trait in your group design project this semester. Marks: about **2 per dimension** (1 name+meaning, 1 real example). Total 4.

The five dimensions (the Big Five Model) — memorize the names

Dimension	Meaning (Doctor's words)
1. Conscientiousness	Achievement: works hard and makes sacrifices to reach the objective.
2. Agreeableness	Getting along with people: friendly, sociable, cooperative.
3. Surgency	Dominant: wants to be in control, enjoys competition, willing to confront.
4. Adjustment	Emotional stability: calm, positive, reacts well under pressure.
5. Openness to experience	Flexible to change, open-minded, enjoys trying new things.

Memory hook: **C-A-S-A-O** — Conscientiousness, Agreeableness, Surgency, Adjustment, Openness. Green rows = easiest to write about.

Ready model answer (adapt the blanks to your real project)

During my group project this semester — designing the **[Online Food Delivery]** system — I applied two personality dimensions from the Big Five Model:

1) Conscientiousness. This dimension is about achievement — working hard and making sacrifices to reach the objective. I applied it by putting in **extra hours to finish our UML class diagrams and the SDD document on time**, and by carefully checking that our design met every requirement before we submitted.

2) Agreeableness. This dimension is about getting along with people — being friendly and cooperative. I applied it when **two teammates disagreed on which design pattern to use**: I stayed friendly, listened to both sides, and helped the group reach an agreement so we could keep moving.

Other pairs you can use instead

- Surgency — you led the meetings, split the tasks, and presented the design to the class.
- Adjustment — you stayed calm and kept the team positive when a diagram had to be redone near the deadline.
- Openness — you suggested a new design pattern the team had not tried, and welcomed changes to the design.

Traps that steal marks

- Don't just NAME two dimensions — you must give a REAL example for each, or you lose half the marks.
- Keep the example about YOUR design project (diagrams, documents, patterns, teamwork), not a random story.
- Use the exact names: Conscientiousness, Agreeableness, Surgency, Adjustment, Openness to experience.
