HALAL INTEGRATED PLATFORM (HIP 2.0) PROJECT CHARTER

Halal Development Corporation (HDC)

Abstract

The project charter is a document that formally authorizes the existence of a project, and provides the project manager with the authority to apply organizational resources to project activities. The project charter is a crucial document in project management as it lays out the project's purpose, objectives, stakeholders, resources, and dependencies during the project planning stage.

1 INTRODUCTION

1.1 Background

HDC is taking measures to strengthen their position as a driver for industry growth by targeting Micro, Small and Medium Enterprises (MSMEs) involved in Halal related sectors and services in order to potentially grow Malaysia Halal export value. Leveraging on their value proposition to the industry through its facilitation services, proprietary solutions, branding and thought leadership, as well as their new structure which has demarcated the lines for different services such as Halal Parks services, Halal Training, Halal Consultancy and more importantly the introduction of a new unit – Halal Integrated Platform, as a technology-driven service provider for HDC.

Halal Integrated Platform (HIP) is anticipated to become the one stop centre for Halal industry players particularly the Micro, Small, and Medium Enterprise (MSME) operator to grow their business through the Halal ecosystem. Via the new HIP platform, HDC envisions a more centralised monitoring and management of Halal industry growth. Provisioning of its services can be channelled in a one-stop centre and its value notable globally.

1.2 Purpose

A project charter is a short document that explains the project in clear, concise wording for high level management. Project charters outline the entirety of projects to help teams quickly understand the goals, tasks, timelines, and stakeholders. The document provides key information about a project, and also provides approval to start the project. Therefore, it serves as a formal announcement that a new approved project is about to commence. Contained also in the project charter is the appointment of the project manager, the person who is overall responsible for the project.

1.3 Overview

The project charter is the outcome of the multiple discussions that was held between the Hyper Analytics Sdn Bhd Team and Halal Integrated Platform (HIP) team from Halal Development Corporation. The series of discussions was held between **18th June 2021 to 26th June 2021** to plan and formalize the project's purpose, objectives, stakeholders, resources, and dependencies during the project planning stage.

2 PROJECT BACKGROUND

HDC aims to create a new and bigger marketspace for Malaysia's Halal products and services by developing effective market access strategies for Malaysian companies to have a greater local and international presence. The Halal industry has grown quite rapidly due to the increased Halal awareness and the surge in consumer demands for halal products and services in Muslim and non-Muslim countries throughout the world.

As the custodian of Malaysia's Halal Economy, Halal Development Corporation (HDC) is entrusted by Malaysian Government to spearhead the development of Malaysia's Halal ecosystem and infrastructure in positioning Malaysia as the most competitive country leading the global Halal Industry. HDC is taking measures to strengthen their position as a driver for industry growth by targeting Micro, Small and Medium Enterprises (MSMEs) involved in Halal related sectors and services in order to potentially grow Malaysia Halal export value.

Halal Integrated Platform (HIP) is anticipated to become the one stop centre for Halal Industry players particularly the Micro, Small, and Medium Enterprise (MSME) operator to grow their business through the Halal Ecosystem. Via the new HIP platform, HDC envisions a more centralised monitoring and management of Halal Industry growth. Provisioning of its services can channel in a one-stop centre and its value notable globally. The objective of HIP are as listed below:

1. Catalysing globalisation opportunities through the market acceleration and access;
2. Nurturing and facilitation local Halal SME's to be an established Halal supplier for local and international market;
3. To be the One Stop Centre that connects and enable Halal industry players to take part in the Halal ecosystem;
4. Provide industrial insight through collective knowledge, expertise, data and tool that empower the industry;
5. Enabling Halal business to leverage on digital space in expanding their market outreach; and
6. Connecting business with the Halal business experts through the halal network and ecosystem.

Confidential

2.1 HIP Architecture

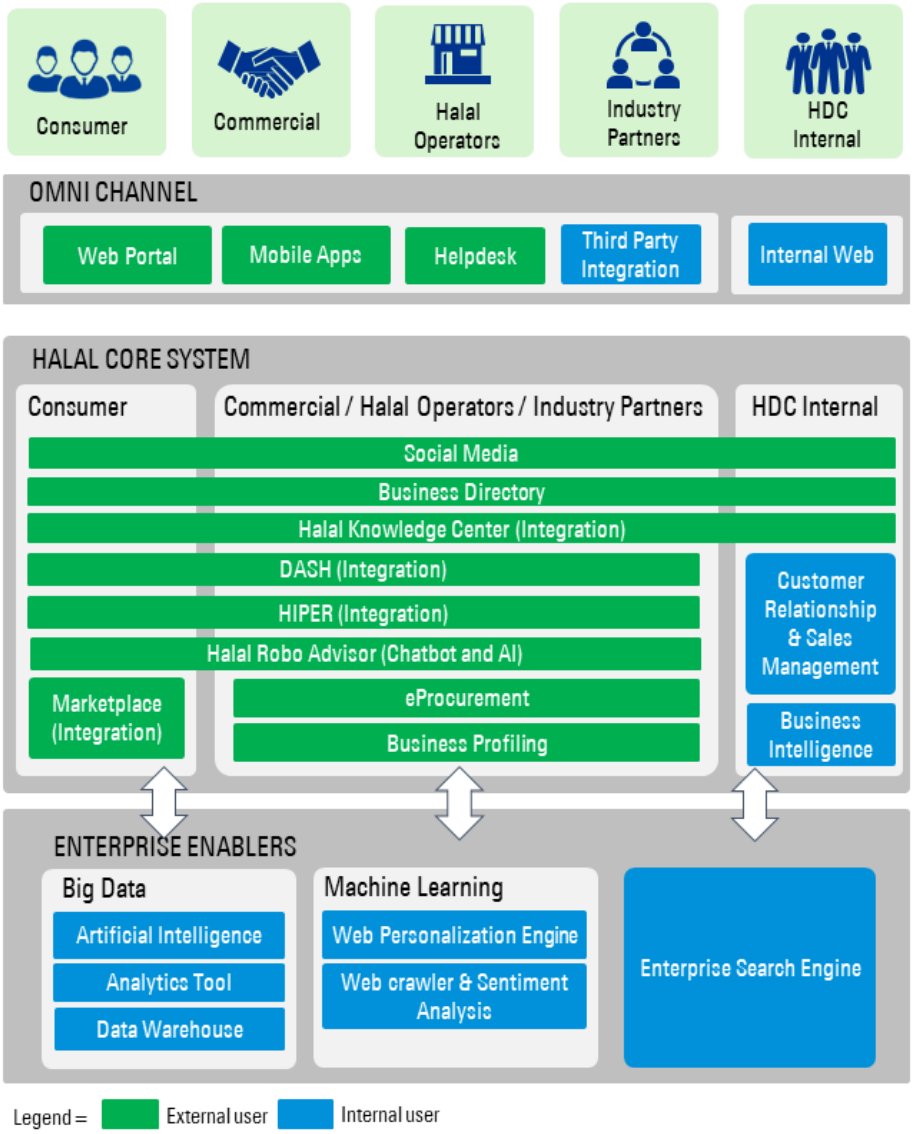

Figure 1: Application Architecture

The above *Figure 1* provides an overview of the HIP architecture. The HIP architecture provides an overview of the halal core system and the building blocks that support the platform. The high level HIP architecture with the following preliminary features in figure above will provide companies or industries solution to tap into the Halal platform or all Halal related enquiries, consultancy and advisory, Halal reference materials and information as well as Halal industry business networking and business matching. The high-level HIP infrastructure envisioned to support the realisation of HIP as the One-Stop centre for Halal Industry development for consumers and businesses. The application building block comprises of three (3) blocks, namely Interaction Hubs, Platform Layer and Enterprise Layer. Each building block provides specific approach as per below.

a) **Interaction Hubs** - Provides the consistent omni-channel experience for customers, partners, investors and businesses. Exposes the business capabilities and functions that are driven by platform technology.

b) **Platform Layer** - Interoperable set of services that delivers a unified experience through the orchestration of systems, processes and functions. Yields business transaction by stitching together a workflow composed of multiple business services.

c) **Enterprise Layer** - Provides data-driven capabilities through analytic and machine learning for improved analysis and forecasting as well as customer needs analysis.

The high-level functionalities of each module are as listed but not limited to the components stated below:

a) **Web Portal** - The main interface for HDC and the external users. The webpage provide a single sign-on facility and enable users to access other module through the web portal. Any future module can be integrated to this portal in providing seamless experience for the users.

b) **Mobile Apps** - The mobile version focus more on providing accessibility of information through mobile devices. The feature will be limited to critical information such as Halal Business directory, Social Media, Market place, Halal knowledge center and others.

c) **Helpdesk** - Channel for the users to reach out for HDC services and system support for any issues related to the system. IVR can be deploy for services that can be cater through phone services.

d) **Third Party Integration** - Platform that provide integration capability to third party system through Application Programming Interface (API). It enables HIP to extract data or to publish data through integration method.

e) **Internal Web** - Portal that is only accessible by internal HDC users in which the information displayed is based on the need of the Units and department. The objective is to highlight the information required by the unit.

f) **Social Media** - Virtual space for halal consumer and community to interact between the consumer, industry player and other service provider. The virtual social space provides a platform for the eco system to connect and interact with each other.

g) **Halal Business Directory** - Centralize Halal business directory and virtual platform for business matchmaking activities. Only paid members are able to list their business in this module and it allows business to perform virtual product pitching through their company microsite.

h) **Halal Knowledge Centre** - Repository of knowledge developed by HDC which includes training videos, journals and market research that can be access both by public and internal. This module is also able to connect with a network of suppliers and consumers within HIP.

i) **DASH** - Digital platform which can accommodate Malaysian companies to showcase its products and services for domestic and international reach. This digital initiative is an alternative for physical presence at global events where Malaysian companies specifically Small and Medium Enterprises will be given the opportunities to showcase their products and services as well as increase products demand digitally to the global market.

j) **HIPER** – Assessment module that enable SME to evaluate their company structure and performance in order to identify improvement areas required by the organisation.

k) **Halal Robo Advisor** - First point of contact through HIP before enquiry is converted into lead for the RGUs. It will assist on the first level of enquiries before passing through the correct channel or services within HIP. Chatbot will be able to manage multiple enquiries at one time, hence will increase operation efficiency.

l) **Marketplace** - Virtual marketplace for business owner that have a premium membership to promote and sell their products online. It will be developed based on the sharing economy platform concept. The platform provides an online payment gateway that can be utilise by seller for cashless transaction such as credit card and e-Wallet.

m) **eProcurement** - Virtual Halal industry procurement platform for businesses that would like to procure products or services from Halal suppliers. The module will only accessible for paid members and the listed suppliers will only be eligible for businesses that has Halal certificate.

n) **Business Profiling** - Business profiling module allows the registered business in HIP to be categorized and defined based on the data and information of their respective business. The categorization will enable RGU to take the next action to facilitate the growth of each business entity. It can also further used by HIP to provide ratings on the business based on the criteria defined by HDC.

o) **Customer Relationship & Sales Management (CRM)** - System that track any potential opportunity or lead detected through the HIP system and support facilitation of SME growth through monitoring and tracking.

p) **Business Intelligence** - This system will provide insight, trend and visibility of Halal Industry and Market based on data collected in HIP. The data can be used to produce publication or assist HDC in monitoring the growth or the trend of Halal industry in Malaysia.

q) **Big Data** - Big Data component enable HDC to be a data driven organization and it enables the organization to share the captured data to a third party stakeholders. The analytical tool would enable the internal HDC users to perform analytics on the data collected.

r) **Machine Learning / Artificial Intelligence** - Intelligence engine and agents that enable HDC to get insights on the industry sentiment within the HIP social media and any other social media platform. It also helps to push for personalized content for each user based on their preference and browse history.

s) **Enterprise Search Engine** - This module is a *Single Search* tool that allows search to be performed throughout all the modules in the HIP system. It will help HIP stakeholders find information that they need in any format in the HIP ecosystem.

3 SCOPE OF WORKS

In general HIP will have the functionalities as listed below:

1. To establish HIP as a One-Stop-Centre for service delivery and industry engagement;
2. To achieve a single point of data entry with the objective of having a single consolidated view of information;
3. To move towards a fully integrated system;
4. To improve timely flow of data between departments in HDC;
5. To be able to support and maintain mission-critical information;
6. To increase data integrity through minimising manual intervention in transaction processing;
7. To provide a single organisation-wide view of HDC's information databases and repositories to support the strategic planning and implementation effort;
8. To improve accessibility to systems and ICT tools for all HDC staff at all levels; and
9. To automate HIP with the objective of increasing efficiency and raising the level of effectiveness by ensuring key applications are available, relevant and adequate.

HIP Design and implementation

1. Vendor is to provide advice in designing HIP that focus on User Experience and System Usability;
2. Vendor is to provide advice in designing platform and the terms and conditions that conforms to related Acts such as *Personal Data Protection Act*, and other related legal compliance;
3. Develop, configure and customize the Halal Integrated Platform (HIP) according to HDC requirement and functionalities stated in the compliance table in Appendix 4 (HIP TOR Functional Requirement);
4. Develop and configure the portal capability to support Social Media, Business Profiling, Customer Relationship Management, Business Directory, eProcurement, and Business Intelligence;
5. Enterprise *Social Networking* platform functions to allow users to perform social networking features such as like/rate, follow, message and share formally and informally;
6. Design and configuration of *Workflow Management* with built-in workflow process with configuration capability;
7. Support for *Metrics Reporting* (e.g. generating search and usage analytics) to allow insights of activities and usage such as user activities on each module, lead conversion and others;

8. To integrate with HDC third party application such as Halal Knowledge Centre (HKC), Digital Augmented / Virtual Reality Showcase of Halal Malaysia (DASH), HIPER portal, Halal Ingredient Database and eMarketplace;
9. Design and develop HIP *API Library* for future external integration; and
10. Vendor is responsible for the creation of procedures and processes related to the solution implementation and data migration (if required).

Technical setup, installation, hardware and software recommendation

1. Vendor is required to propose the hardware, infrastructure, appliances, server, and software that are necessary for this successful implementation of the solution are to be proposed and catered for the period of 1 year;
2. Vendor will need to prepare their own development, testing and deployment infrastructure to be utilize for the implementation of the HIP;
3. Vendor should configure and setup the hardware and software accordingly at various tests, DR, staging and production environments for any setup specific to HIP;
4. The infrastructure should support High Availability (HA);
5. If required all cabling to be catered by vendor; and
6. Vendor to include projection cost of operation for the next 3 years of HIP after Go Live, with the assumption of 40% user growth yearly.

System Integration

1. Assist in the creation of procedures and processes related to the solution integration between systems;
2. Supply, deliver, configure, test and commission the integration between systems;
3. The HIP should have the capabilities to integrate with other systems. Some of the potential integration systems in HDC are Halal Knowledge Centre (HKC), Digital Augmented / Virtual Reality Showcase of Halal Malaysia (DASH), HIPER portal, Halal Ingredient Database and e-Marketplace. All integration should allow for future implementation; and
4. Vendor is required to support and work the applications' vendor and application team during the implementation of the integration with HIP, not limited to design, requirements, testing and development until the successful rollout of the integration with the application.

Security Advice

1. Design and implement *Security Access Matrix* (SAM) according to the roles. The SAM Mapping shall be developed together with HDC during the implementation; and

2. Support for Access and Controls, Security and User & Group Management with mechanisms to protect the information such as, but not limited to, role-based access control (i.e. tiered permission), assigned privileges (i.e. add, edit, delete and view only), data loss prevention, prevents multiple logins within a stipulated period of time and data security.

Test Execution & Management

1. Vendor shall devise the test plan, test basis, test cases and other related documents according to the test levels and test types. These documents will be reviewed with HDC for agreement and signing off;
2. The test levels/ test types should cover but is not limited to the following :-
   - Development/Unit Test;
   - System Integration Test;
   - User Acceptance Test;
   - Final Acceptance Test (3 months period after go-live); and
   - Performance Test and all other project testing phases required as part of the project and its required documentation.
3. Vendor is required to perform a system load test to measure the load that can be handled by their proposed system; and
4. Vendor to provide application stress test to determine the application's robustness, availability and reliability under extreme conditions.

Documentation/Manual

1. Provide documentation (hardcopy/softcopy) for the following areas should comply with MS ISO 9001:2015 standard quality:
   i. Training materials;
   ii. Technical operations manual;
   iii. User manual;
   iv. Administration manual;
   v. Project Documentation;
   vi. System & Operational Manuals;
   vii. Test Documentations;
   viii. All other related manuals; and
   ix. Project Management Plan documentation which should include the following:
      - Background;
      - Scope;

- Work Breakdown Structure (WBS) and its Dictionary;
- Deliverables;
- Implementation plan;
- Project Organizational Chart;
- RACI Matrix of the Vendor;
- Foreseeable Project Risks;
- Communication Plan;
- Project Timeline; and
- Project best practices.

Communication, Change Management and Training

1. Provide all relevant services in commissioning the project, not limited to, the change management processes and deliverables;
2. Provide the necessary training for HDC end users, administrators and key persons that will be involved in this project. Conduct Train–the trainer sessions with identified stakeholders during the implementation. The number of the sessions shall consider the numbers of participants and locations of the participants; and
3. To develop online training material such as online tutorial for external users.

Project Management and Implementation

1. Provide *Project Management* in the implementation for the whole solution including implementation and communication strategy. Project Manager must be the single point of contact and the one to have an overall overview of the smooth implementation of the project. In case of multiple Vendors, the Project Manager will have to be accountable;
2. Project Management will be using PMBOK, Agile or other equivalent methodology that are deem to be the best fit for the project implementation strategy; and
3. Post Implementation Review within 3 months of the final acceptance. Project Closure and Post Implementation Review will be reviewed upon agreement with the selected vendor.

Support and Maintenance

Propose *post implementation* support coverage for:

1. On-going (software and support/maintenance services);
2. Software Warranty, if applicable; and
3. Provide and maintain all necessary hardware, software, and all licenses (if applicable) required for 3 years.

4 PROJECT TIMELINE

4.1 Introduction

Based on the proposed project timeline in the diagram below, we estimate to complete the project within **7 calendar months**. Please refer below for the high level project timeline.

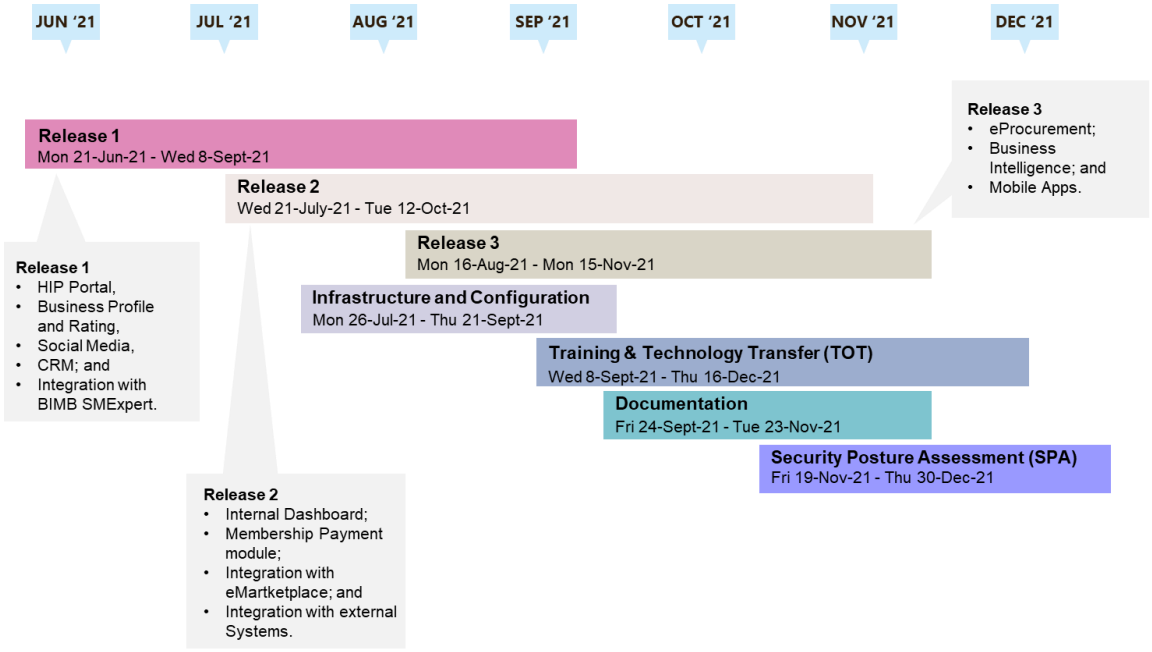

Figure 2: High level project timeline

All major mile stone had been marked and highlighted such as

1. Kick-off Meeting & Contract Sign-off – **Week 2** (25/06/2021);
2. Requirements Study & Design Specification – **Month 2** (16/07/2021) & **Month 3** (20/08/2021);
3. **Release 1** – **Month 4** (08/09/2021);
4. Infrastructure & Configuration – **Month 4** (21/09/2021);
5. **Release 2** – **Month 5** (12/10/2021);
6. **Release 3** – **Month 6** (15/11/2021);
7. Documentation – **Month 6** (23/11/2021);
8. Training & Technology of Transfer (ToT) – **Month 7** (16/12/2021);
9. Security Posture Assessment – **Month 7** (30/12/2021); and
10. Final Acceptance Sign-off – **Month 7** (31/12/2021).

24 Months Maintenance & Support with 8 preventive maintenance health checks session will be provided for the project to ensure the solution implemented runs smooth without unexpected disruption during the warranty period.

4.1.1 Release 1 (Target Date: 08/09/2021)

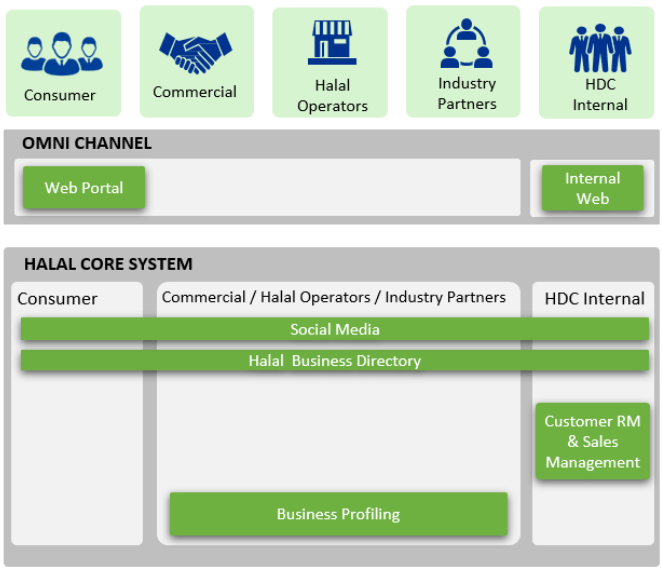

Figure 3: HIP 2.0 Release 1

The above diagram depicted the **Release 1** modules for this project. Release 1 module descriptions are as listed below:

1. **Web Portal** - The web portal is a series of web pages, images, information, updates, and other digital assets that can be accessed through the internet on a web server. It is would be accessible, user-friendly, simple, and contains basic information just to entice the public to register with HIP and experience the benefits as HIP subscribers. It also embarks on HIP partner's advertising and marketing as well as attracts a service provider to register and collaborate with the HIP. The web portal will lead any visitor to register or sign in to the Internal Portal to acquire more Halal information, request a Halal service, participate in the Halal program, and more.

2. **Internal Web** - The Internal portal is a one-stop centre for all the e-Services and also as a virtual communication channel for the HIP to share useful information and current update to

the public. There is different access for HDC members (Management, RGU, and HDC members) and HIP members (paid or free users) hence, the dashboard (in the main page) view would be different for each type of access. However, to use all the features in Internal Portal HIP members need to subscribe hence, HIP could generate revenue from the membership. This single sign-on (SSO) platform would provide features business, and services from HDC members and HIP partners. It also embarks on advertising and marketing offers for all portal subscribers. The display on the main page would allow HIP members to view and manage their task, submitted application, the status of their helpdesk ticket, search content, and change language. This Internal portal is like a virtual mall. The HIP member's data captured in the portal would be utilized by Business Intelligence then, helping the members to provide information via many features such as dynamic dashboard, ads personalization, report, and more to make a decision as well as improves business.

3. **Social Media** - HIP Community uses a concept same as other social media such as Facebook to interact with people, share information, and engage in any events. However, the HIP community is only exclusive to HIP members and not open to the public like other social media. Its purpose is to attract potential clients, obtain feedback, increase market reach, getting the latest Halal industry news, develop customer networks, advertising, and branding. This social media platform should be able to highlight all vital discussions or events between HDC and HIP members as well as linking with each other.

4. **Business Profiling** - HIP members need to fill up the Business profile in other to utilize the data and display it in the Business Directory and business page. A Business Profile will capture basic information, organization information, service, and product list, as well as financial performance. HIP rating is given based on the information filled in the Business Profile. While, Business Page will display the basic and service or product list information. It is also a platform for HIP members to publish marketing collateral that may create a lead between the members through the HIP. This business profiling is one of the features that would enhance Business Intelligence.

5. **Halal Business Directory** - It is a platform comprises of two key features they are the search engine that allows user to search using keywords and directory that allow users to browse the information using the defined taxonomy. The taxonomy would consider a filter by state, industry, type of product, and certified Halal JAKIM. A search engine will be able to perform these multiple criteria. This section would provide a HIP member with a list of companies

with a basic description based on the taxonomy selection and keyword search. It would generate another section which is a Business Profile.

6. **Customer Relationship Management (CRM) and Sales Management** - It aims to maintain and enhance customer service relationships between HIP members and HDC business growth. HIP would manage all records of HIP stakeholders to manage sales activities, enrolment in any program, or any inquiries. It also allows the HIP to provide insight on areas of opportunity and demand of the Halal industry as well as enhance customer satisfaction. Technically, HIP and RGU would have a CRM dashboard to manage a lead and task.

7. **Integration with External Systems** - Integration with HIP will provide single sign on features and links to modules available in HIP. API Library will be developed for future integration between other systems with HIP. It enable HIP to have the ability to export and tracking data from third party applications and the ability to store selected third party application data on HIP database.

4.1.2 Release 2 (Target Date: 12/10/2021)

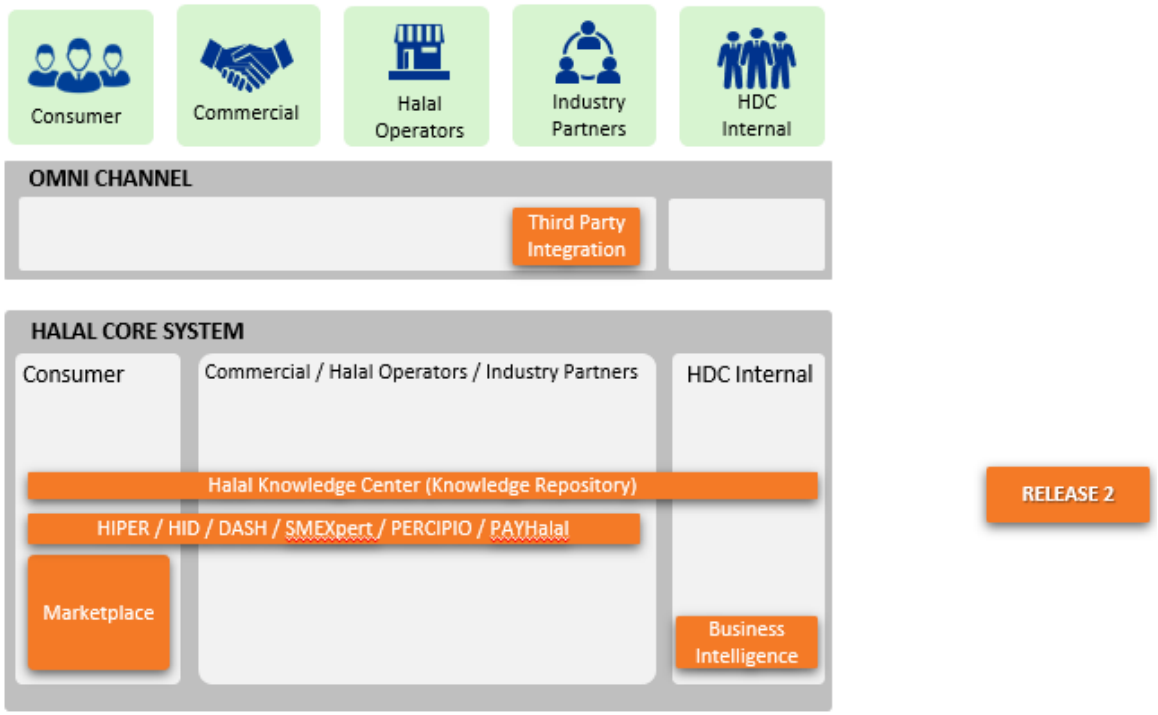

Figure 4: HIP 2.0 Release 2

The diagram above depicted the **Release 2** modules for this project. Release 2 module descriptions are as listed below:

1. **Integration with External Systems** - Integration with HIP will provide *Single Sign On* features and links to modules available in HIP. API Library will be developed for future integration between other systems with HIP. It enable HIP to have the ability to export and tracking data from third party applications and the ability to store selected third party application data on HIP database.

2. **E-Marketplace** - An online marketplace is a platform that connects third-party companies to sell their product or services to the consumer in the virtual market. This B2B and B2C concept operate as sharing economy platform for halal business to sell their products or services and provide SMEs with an online platform that they can use to complement their existing traditional business. HIP will be integrating with Wowshop as the eMarketplace operator of HIP Halal eMarketplace.

3. **Business Intelligence** - It will provide insight, trends, and visibility of the Halal industry and market based on data collected in HIP and business profiles, which management would use to analyse the current operational performance as well as to identify new opportunities and risks surrounding HDC. It is the tool to support the decision-making process among the management, HDC, and HIP members by consolidating information relevant to the strategic direction. In this section HIP and HDC members will get a visual of a Dynamic Dashboard and Geographic Information System (GIS).

4. **Halal Ingredient Database** - This platform comprises two (2) key features and they are the search engine that allows users to search using keywords and location taxonomy. With a search engine and location filter, HIP members will be able to perform these multiple criteria.

4.1.3 Release 3 (Target Date: 15/11/2021)

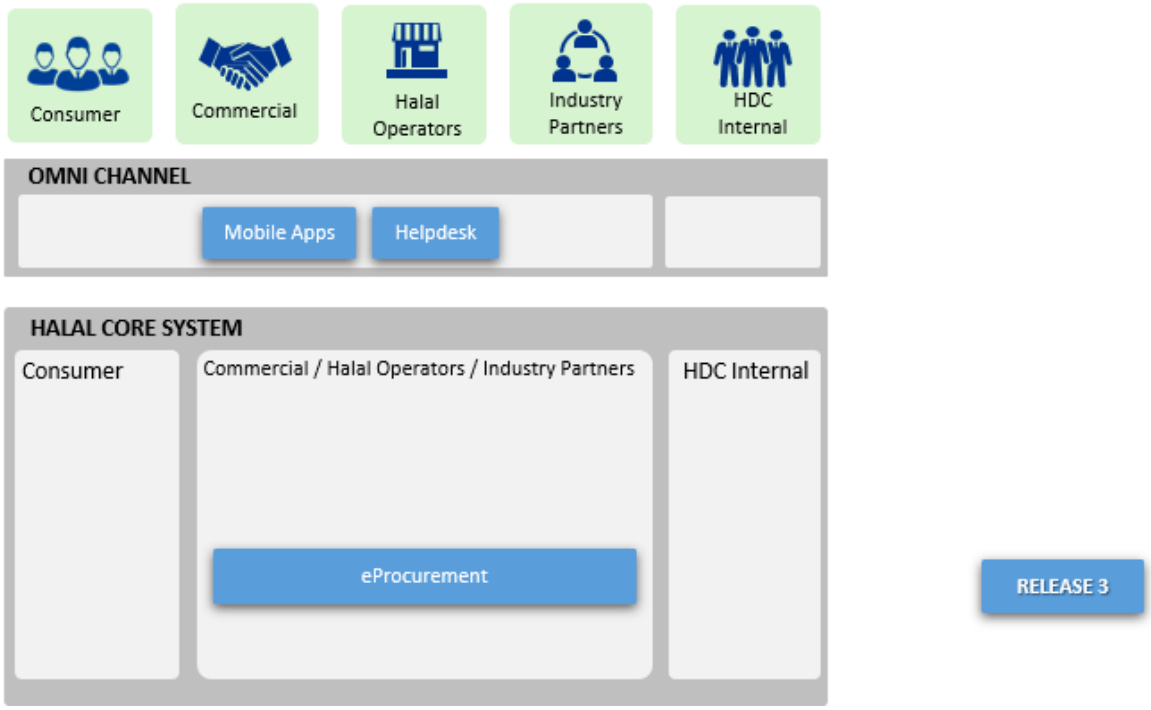

Figure 5: HIP 2.0 Release 3

The diagram above depicted the Release 3 modules for this project. Release 3 module descriptions are as listed below:

1. **Mobile Apps** – it is the lighter version of the HIP that focuses on the core functionalities that enable the user to have access to all the key services available in HIP. Mobile Apps will be

developed for both iOS and Android version. The purpose of HIP Mobile Apps is to enable users to have a quick access to the information available in HIP and to be able to interact with HIP via Mobile Apps.

2. **E-Procurement** – One of the important features in eProcurement is e-Tendering where to enhance the process of tendering for the procurement of the HIP member through HIP. The eProcurement features should cover the entire tendering cycle as follows:
   - Registration of Suppliers;
   - Selection of preferred Suppliers;
   - Submission of quotation, Opening of tender;
   - Comparison of prices, Negotiation of prices;
   - Selection of Suppliers, Award of tender; and
   - Vendor and contract management.

   This module should also provide features that enable online creation by entering information such as value of Halal product or services, duration & ceiling of the contract, payment period and delivery. This will make an Improvement in supply chain mechanisms that offer mutual benefit for all HIP stakeholders using the e-procurement system.

3. **HIP Rating Mechanism** – It is a mechanism that automatically set the star rating for each HIP member that met the defined criteria for each stars. The criteria will be based on the value defined in the company profile and the star rating will be refreshed based on the update of the value defined in the business profile. The proposed Star Rating mechanism are as listed below:
   - **1 Star** – Companies that has a valid registration number;
   - **2 Star** – Companies who have various certifications like MESTI, EXCEPT Halal Certification. These companies will then complete their Halal per-qualification exercise and submit their application via HCA to JAKIM;
   - **3 Star** – Companies that has a valid Halal Certificate from JAKIM;
   - **4 Star** – Halal Certified Companies who have acquired Re-Insurance services for export, HACCAP, GMP etc. certification and are capacity ready for exports; and
   - **5 Star** – SME's who have exported their products to the International Market.

4. **Helpdesk –** It is a one-stop point of contact where HIP users can send their questions or problems. The module allows businesses to resolve customer queries and concerns by

managing tickets from receipt all the way to resolution. It also provides agents with a wide array of support and tools that promote collaboration to respond to queries properly and immediately.

5 PROJECT ORGANIZATION CHART & STAKEHOLDERS

5.1 Project's Organization Chart

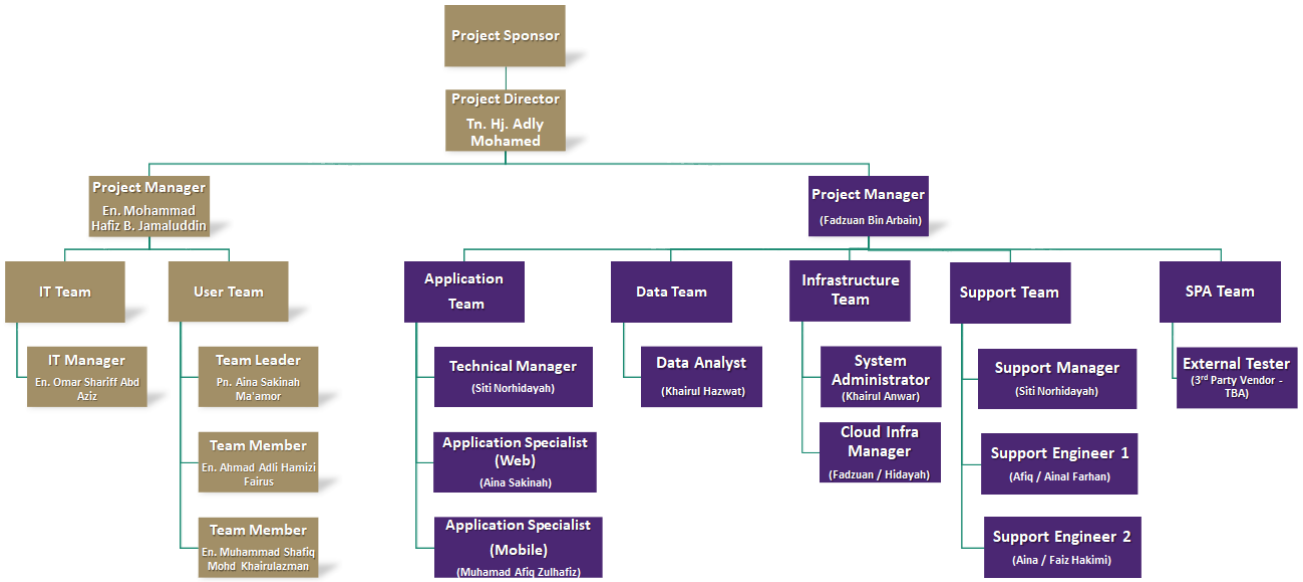

Figure 6: HIP 2.0 Project Organization Chart

Based on the above diagram, the requirements had been provided in the tender specification and the requirements specifications session conducted with the project team. Subsequently we have identified the most preeminent solution to be developed so as to ensure HDC receives the best solutions and meets the daily operational needs of the HIP project. The following diagram depicts the proposed *High-Level Project Organization Structure* (Please Refer to Appendix 1).

A successful project requires that the project team participates in every stage of the project implementation. The level of the participation varies according to the roles and responsibilities of the project team. It is important to have a defined formal structure for the project and for the project staff. This provides each individual with a clear understanding of the authority given and responsibility necessary for the successful accomplishment of the project activities. Project team members need to be accountable for the effective performance of their assignments.

The Project Organization Structure is designed in such a way, with the objective of producing the best result for the project. There are three (3) main levels of management involved:

1) The Policy & Direction – represented by the Steering Committee;
2) The Project Management – represented by the Project Management Team; and

3) The Project Team – represented by the technical team, consultants, subject matter expert and Project Management Officer.

Our commitment to HDC is to provide qualified and experienced Project Manager to manage the overall execution of project activities. Based on our understanding of the tender document specific requirements, we propose the following professionals for this engagement.

5.2 Project Team Roles and Responsibilities

Title	Role
Project Manager	The person responsible for developing, in conjunction with the Project Committee. The Project Manager then ensures that the project is delivered on time, to budget and to the required quality standard (within agreed specifications). He/she ensures the project is effectively resourced and manages relationships with a wide range of groups (including all project contributors). The Project Manager is also responsible for managing the work of consultants, allocating and utilizing resources in an efficient manner and maintaining a co-operative, and successful team.
Responsibilities	
• Managing and leading the project team. • Recruiting project staff and consultants • Managing co-ordination of the partners and working groups engaged in project work. • Detailed project planning and control including: • Developing and maintaining a detailed project plan. • Managing project deliverable in line with the project plan. • Recording and managing project issues and escalating where necessary. • Resolving cross-functional issues at project level. • Managing project scope and change control and escalating issues where necessary. • Monitoring project progress and performance. • Providing status reports to the project committee. • Managing project training within the defined budget. • Liaison with, and updates progress to, project steering board/senior management.	

- Managing project evaluation and dissemination activities.
- Managing consultancy input within the defined budget.
- Final approval of the design specification.
- Working closely with users to ensure the project meets business needs.
- Definition and management of the User Acceptance Testing programme.
- Identifying user training needs and devising and managing user training programmes.

Title	Role
Technical Manager	Technical Manager are responsible for moving the team to accomplish its task. Team leaders will ensure an environment that helps teams get their work done. He/she also responsible in coordinating the team to meet the objective.
Responsibilities	
• Elevate and inspire team members • Lead by setting a good example (role model) - behaviour consistent with words • Facilitate problem solving and collaboration • Strive for team consensus and win-win agreements • Ensure discussions and decisions lead toward closure • Maintain healthy group dynamics • Intervene, when necessary, to aid the group in resolving issues • Assure that the team members have the necessary education and training to effectively participate on the team • Coordinate with internal and external customers as necessary • Familiarize the team with the customer needs, specifications, design targets, the development process, design standards, techniques and tools to support task performance • Assure that the team addresses all relevant issues within the specifications and various standards • Provide necessary business information • Ensure deliverable are prepared to satisfy the project requirements, cost and schedule • Help keep the team focused and on track • Provide status reporting of team activities against the program plan or schedule • Keep the project manager and product committee informed of task accomplishment, issues and status	

- Serve as a focal point to communicate and resolve interface and integration issues with other teams
- Escalate issues which cannot be resolved by the team
- Provide guidance to the team based on management direction

Title	Role
Application Specialist	Application Specialist responsible in developing application and improve the existing application according to requirement and design in the planning stage.
Responsibilities	
• Designs systems from a user perspective • Designs human factors (windowing, ease-of-use) • Design's externals (screens, reports, forms) • Design's usability of the application • Designs application software components, including programs, modules, and run units • Prototypes, develops, and unit tests application software components or fragments • Typically, knowledgeable in one or more development environments • Develops against accepted organization and common development standards • Participates in planning, design and application documentation	

Title	Role
Data Analyst	Data analyst is highly analytical, have strong mathematical skills and are curious and inquisitive. The ability to pay attention to detail, communicate well and be highly organised are essential skills for data analysts. Data analyst not only need to understand the data, but be able to provide insight and analysis through clear visual, written and verbal communication. Data analyst work across a range of areas, including: • business intelligence • data assurance • data quality • Dashboard Designs

	• Report Template Designs
Responsibilities	
• Designs systems from a user perspective • Designs human factors (windowing, ease-of-use) • Design's externals (screens, reports, forms) • Design's usability of the application • Designs application software components, including programs, modules, and run units • Prototypes, develops, and unit tests application software components or fragments • Typically, knowledgeable in one or more development environments • Develops against accepted organization and common development standards • Participates in planning, design and application documentation	

Title	Role
System Administrator	System Administrator (Sysadmins) are vital roles within an IT project, often covering a wide range of technology support. Common sysadmin tasks may range from installation and deployment of servers to providing troubleshooting and technical support for projects.
Responsibilities	
• Monitoring and alerting - the system administrator (SysAdmins) is in charge of monitoring and alerting across applications and infrastructure. Monitoring core server and network metrics like CPU, disk usage, DNS, latency and ETL can help SysAdmins detect an incident. Set up alerts based on monitoring thresholds to receive on-call notifications in case of any major incidents. • User permissions and administration - System administrators are generally in charge of user permissions and administration for all applications and services. • File organization and management - To ensure data organization and consistency, the SysAdmin will usually place policies and procedures around the way files are organized and shared within the organization. Along with most of the other SysAdmin responsibilities, this is to ensure security from external attacks as well as ensuring appropriate, easy access to files for employees. • System usage policies and procedures - At a very general level, the system administrator will need to define best practices for working within the organization's systems. This includes everything from proprietary software to different third-party IT applications and	

services.

- Software installation, updates and upkeep - Put policies and procedures in place to keep up with software installation and updates. If there are any errors with new updates or interdependencies between new versions of systems, the SysAdmin should be able to detect these issues and fix them.
- Redundancies, rollovers and recovery plans - SysAdmins will have active, updated plans for redundancies, rollovers and incident recovery. Through effective monitoring, alerting and cross-functional communication, the system administrator will be able to quickly detect any failures and remediate IT incidents.
- Security - The SysAdmins will be performing all actions in a secure way. As they set up networks, policies and servers, the SysAdmin will know how to do it in a technically sound, secure way.
- Maintaining documentation and updating runbooks - Maintaining documentation and keeping runbooks up-to-date and leverage automation to keep runbooks and documentation accurate and updated without slowing the development lifecycle.
- Incident detection, response and remediation - Set up a system to allow for rapid incident detection, response and remediation in case an issue occurs.
- Preparation and problem solving - Finding ways to reduce bottlenecks in the deployment lifecycle while simultaneously reducing risks in IT and security infrastructure.

Title	Role
Support Engineer	A Technical Support Engineer will research, diagnose, troubleshoot, and resolve customer issues in an accurate and timely manner. Support Engineer will be responsible for working with different applications, modules, and hardware and follow standard procedures to escalate unresolved issues to appropriate internal experts to resolve these technical issues.
Responsibilities	
• Address user tickets regarding hardware, software and applications; • Walk customers through installing applications and computer peripherals; • Ask targeted questions to diagnose problems; • Guide users with simple, step-by-step instructions; • Conduct remote troubleshooting;	

- Test alternative pathways until you resolve an issue;
- Customize applications' settings to meet user needs;
- Record technical issues and solutions in logs;
- Direct unresolved issues to the next level of support personnel;
- Follow up with clients to ensure their systems are functional;
- Report customer feedback and potential product requests; and
- Help create technical documentation and manuals.

Title	Role
Security Posture Assessment Team (3rd Party Vendor)	Security engineers are responsible for testing and screening security software and for monitoring networks and systems for security breaches or intrusions. Security engineers can often resolve possible causes of security threats early on by looking at things from a security perspective and recommending enhancements to the project team. Security engineers have to know how to pinpoint any potential threats, how to plan and prepare before any security threats take place. Security engineers act as an all-in-one security team by implementing and testing strategies, reporting on any incidents for future preparation, keeping track of the status of network security, and educating the project's team members to raise security awareness.
Responsibilities	
• developing a set of security standards and practices • creating new ways to solve existing production security issues • recommending security enhancements to management • conducting scans of networks to find vulnerabilities • conducting penetration testing • conducting load test for performance benchmark • testing security solutions using industry standard analysis criteria • watching out for irregular system behaviour • supervising changes in software, hardware, and user needs • reporting findings to the project's team members	

6 SUMMARY

HIP project is using *Feature Driven Development* (FDD) as the development methodology. FDD Tools had been used to generate diagram to visualize all the identified feature sets/modules that need to be delivered in this implementation and help to keep track of all the features to be delivered in a timely manner. These feature definitions will also be used as a guideline to produce test scripts for the acceptance test of these solutions.

During the detailed feature set definition workshop that had been done with the HDC HIP team, and subsequently the project team have recorded and discussed on these requested features. All feature sets and features that needs to be delivered had been defined. Below are the list of solution's component and their detailed feature sets of all the modules involved in the new implementation of HIP project, which will be discussed in later sections of this document.

1. **HIP Interaction HUB** - Provides the consistent omni-channel experience for customers, partners, investors, and businesses. Exposes the business capabilities and functions that are driven by platform technology.
    - Web Portal;
    - Internal Portal;
    - Helpdesk; and
    - Mobile Application.

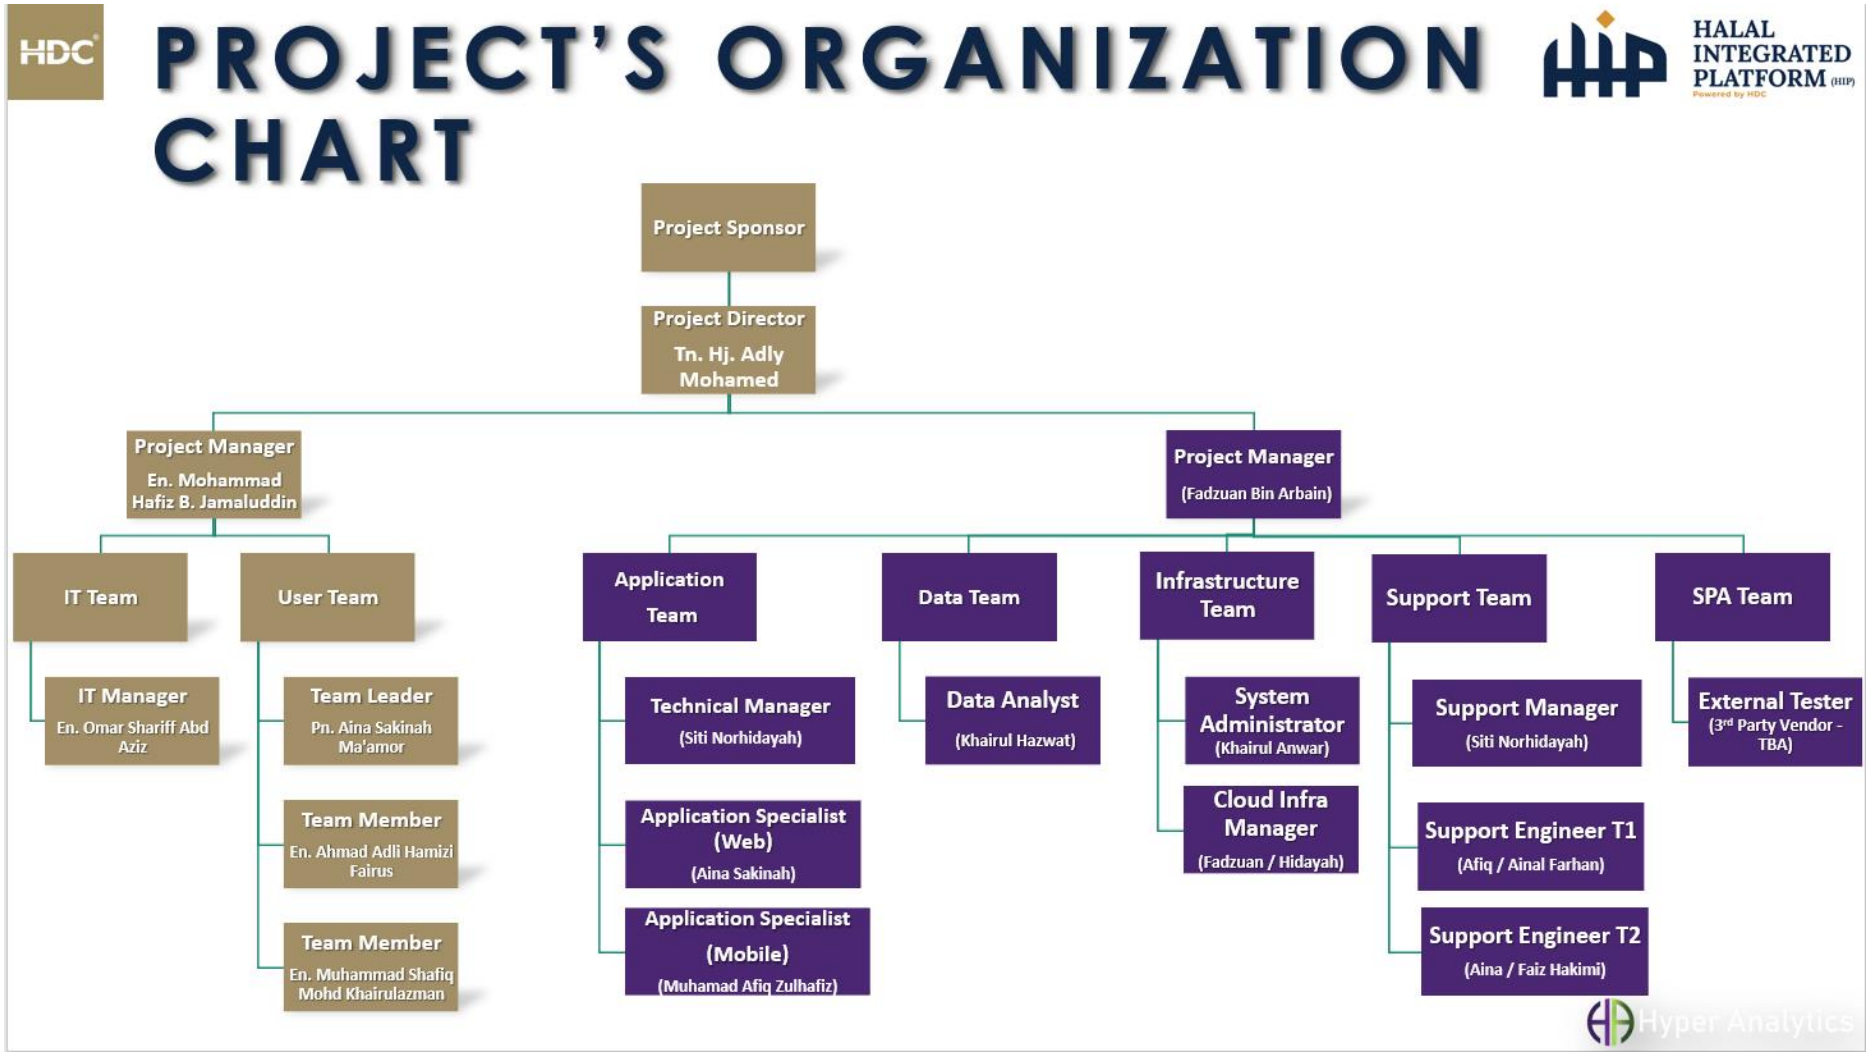

2. **Platform Layer** - Interoperable set of services that delivers a unified experience through the orchestration of systems, processes and functions. Yields business transaction by stitching together a workflow component of multiple business services.
    - Social Media;
    - Business Profiling;
    - Business Directory;
    - Customer Relationship & Sales Management;
    - E-Procurement;
    - E-Marketplace;
    - Business Intelligence; and
    - Administration Console.

3. HIP Integrations

- Halal Knowledge Centre (HKC);
- Digital Augmented Reality Showcase of Halal Malaysia (DASH);
- HIPER;
- Halal Ingredient Database;
- Percipio;
- SMEXpert App;
- E-Marketplace; and
- PayHalal.
