1. Introduction

The Halal Integrated Platform (HIP 2.0), developed by Hyper Analytics Sdn. Bhd. for the Halal Development Corporation (HDC), serves as a nationwide digital ecosystem that supports Malaysia's halal industry. The platform enhances business visibility, halal certification processes, networking, and knowledge sharing among industry players, particularly MSMEs. HIP 2.0 is developed in five incremental releases following Agile principles. This report focuses on Release 5, the final implementation phase emphasizing enhanced user engagement and value-added features. Based on the "HIP Completion Report v1.3 FINAL," Release 5 includes major modules such as Mailing List Broadcasting, Business Matching, Customer Centre Knowledge Base, and Bulk Registration. The goal of this assignment is to analyze Release 5 features, develop Epics, write User Stories, specify Acceptance Criteria, and break down tasks in alignment with Agile project management practices.

2. Identified Features for Release 5

The following features were selected:

1. Mailing List Broadcast System

2. Business Matching (Mobile App)

3. Customer Centre Knowledge Help Centre

4. Bulk Registration Module

3. Epics and User Stories

Epic 1 – Mailing List Broadcast System

User Story 1.1 – Recipient Filtering

As an HIP Admin, I want to filter recipients before sending an email blast so that only targeted members receive the announcement.

Acceptance Criteria:

Positive: Filtering by member type, state, and role is enabled; filtered results appear; email sends successfully.

Negative: If no matching users exist, a No recipients available message appears if the admin is not logged in, the access is denied.

User Story 1.2 – Excel Recipient Export

As a HIP Admin, I want to download the filtered recipient list in Excel format so that I can maintain proper communication records.

Acceptance Criteria:

Positive: Clicking "Download Excel" generates a valid spreadsheet with correct data.

Negative: If no results exist, a warning “Nothing to export” is shown.

Epic 2 – Business Matching

User Story 2.1 – Display Matches

As a HIP Member, I want to view recommended business matches so that I can connect with potential partners.

Acceptance Criteria:

Positive: System displays match results with percentages; sorting is available.

Negative: No matches → “No matching businesses found”; user not logged in → access denied.

User Story 2.2 – Swipe Interaction

As an HIP Member, I want to swipe right to accept or swipe left to reject business matches so that I can express interest easily.

Acceptance Criteria:

Positive: Right swipe saves to “Accepted”; left swipe saves to “Rejected.”

Negative: Offline usage displays “No Internet Connection.”

Epic 3 – Knowledge Help Centre

User Story 3.1 – Search FAQs

As a HIP Member, I want to search FAQ articles so that I can quickly find help.

Acceptance Criteria:

Positive: Keyword search returns relevant articles with titles and ratings.

Negative: “No related articles found” when no match exists.

User Story 3.2 – Publish Articles

As an Admin, I want to publish help articles so that members receive updated information.

Acceptance Criteria:

Positive: Admin can create, edit, and delete articles; changes appear instantly.

Negative: Missing mandatory fields prevent publishing.

Epic 4 – Bulk Registration

User Story 4.1 – Upload Excel

As a HIP Admin, I want to upload an Excel sheet to register users in bulk so that I can save time.

Acceptance Criteria:

Positive: Valid Excel uploads create accounts; system displays success/failure summary.

Negative: Invalid file type → "Only .xlsx allowed."

User Story 4.2 – Preview Data

As a HIP Admin, I want to preview uploaded data before confirming registration so that I can fix mistakes.

Acceptance Criteria:

Positive: Preview table displays extracted values; rows can be edited or removed.

Negative: Parsing failures show error messages.

4. Task Breakdown & Responsibilities:

Epic	Member	Key Tasks	Est. Hours
Mailing List	Member 1	UI forms, filtering logic, Excel generation, testing	30h
Business Matching	Member 2	Matching algorithm, swipe UI, API integration, testing	28h
Knowledge Help Centre	Member 3	Search UI, article CRUD, RBAC, testing	28h
Bulk Registration	Member 4	Excel parser, upload UI, validation, preview table, testing	30h

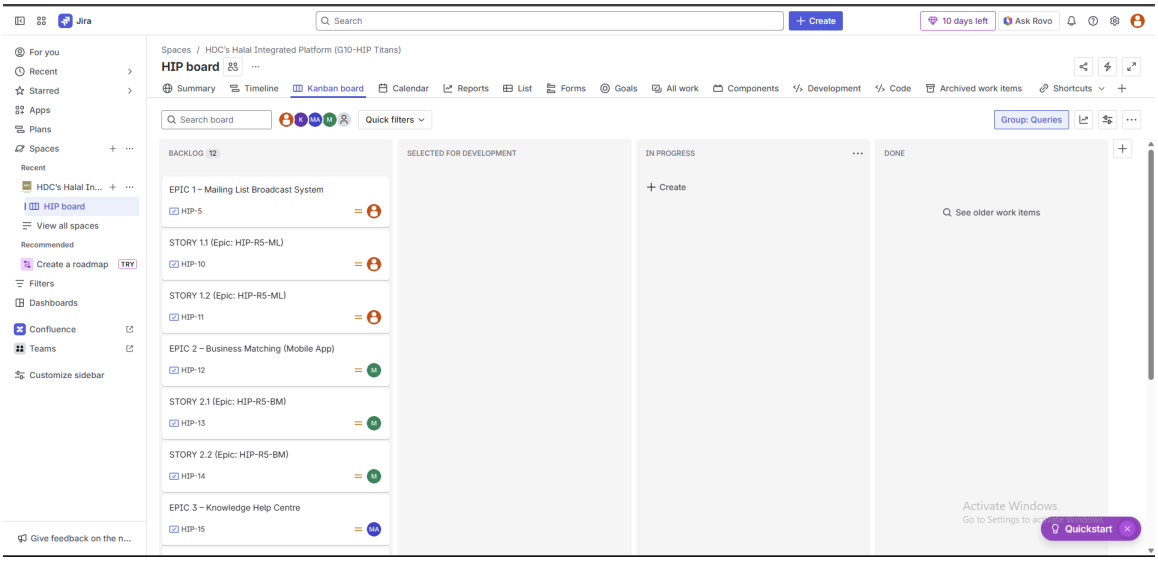

5. Team Collaboration Reflection

Our team collaborated effectively by distributing the four Release 5 features equally to each member. We used discussions to ensure a consistent understanding of the project requirements, referring to the HIP Completion Report for accuracy. Each member contributed two User Stories with acceptance criteria and tasks. Overall, the teamwork was smooth, productive, and reflected shared responsibility.

6. Conclusion

This report summarizes the feature identification, Epic creation, User Stories, acceptance criteria, and task breakdown for Release 5. It demonstrates the application of Agile practices for project planning and delivery.
