Software Project Management

Assignment 1 – User Stories Development

Project Background

Hyper Analytics Sdn. Bhd. is a software development company appointed as the vendor to design and implement the Halal Integrated Platform (HIP 2.0) for the Halal Development Corporation (HDC) a government-linked agency under Malaysia's Ministry of Investment, Trade and Industry (MITI).

The Halal Integrated Platform (HIP 2.0) is envisioned as a one-stop digital hub that connects and empowers halal industry players, particularly Micro, Small, and Medium Enterprises (MSMEs). The platform facilitates business profiling, halal certification support, knowledge sharing, e-marketplace activities, and halal networking to strengthen Malaysia's halal ecosystem.

The system development is divided into five (5) releases, each introducing key features and deliverables as summarized below:

Release	**Summary of Deliverables / Modules**
Release 1	Core setup including Web Portal, Internal Portal, Social Media (HIP Community), Business Profiling, Halal Business Directory, and Customer Relationship Management (CRM).
Release 2	Introduction of E-Marketplace, Business Intelligence Dashboard, Halal Ingredient Database, and integration with external systems for seamless data sharing.
Release 3	Deployment of Mobile Apps (iOS & Android), E-Procurement, HIP Rating Mechanism, and Helpdesk for service support.
Release 4	Enhancement of data analytics, integration with Halal Knowledge Centre (HKC), HIPER, DASH Digital Showcase, and external data sharing API library.
Release 5	Final implementation phase focusing on user engagement and value-added features including: • Mailing List for announcement broadcasting by HIP Admin. • Business Matching in Mobile Apps for connecting relevant businesses. • Customer Centre Knowledge Base for FAQs and guidance. • many more…

Task Instructions

Based on the system documentation and project briefing by Hyper Analytics SB, you are required to deliver project assignment 1 that comprises the following activities.

Activity	Description
1. Team Setup in Jira	Appoint one (1) team leader to create a Jira Software account. The leader must register a new project titled "HDC's Halal Integrated Platform" and add the other three (3) members and the instructor as collaborators.
2. Review and Feature Identification	Review the HDC HIP 2.0 Project Charter carefully. Each group will be assigned one project release (Release 1–Release 5). Identify four (4) key features/modules relevant to your assigned release (e.g., Web Portal, Business Directory, CRM, E-Marketplace, Helpdesk). Each member must: Own and register one (1) Epic in Jira for the assigned release and create two (2) detailed User Stories under that Epic using the Agile format: *"As a [user], I want [functionality] so that [benefit]."*
3. Acceptance Criteria	For each User Story, define clear and testable acceptance criteria including both positive and negative scenarios. Example: Positive: Given the user is logged in, when they search for a certified supplier, then matching businesses are displayed. Negative: Given the user is not logged in, when they attempt to access the directory, then an access denied message is shown.
4. Task Breakdown (Jira-Style)	Break down each User Story into tasks and subtasks (e.g., UI design, backend logic, testing, deployment). Assign responsibilities and time estimates for each subtask in Jira.
5. Collaboration & Evidence of Teamwork	Demonstrate teamwork by submitting: Screenshots of your Jira board showing Epics, User Stories, Tasks, and Acceptance Criteria, and a group reflection (100–150 words) summarizing how the team collaborated, made decisions, and distributed roles.

Expected Deliverables

- A Jira project showing all Epics, User Stories, Tasks/Subtasks.
- Acceptance Criteria with both positive and negative scenarios.

Assessment Rubric

CLO2 (C4) – Classify proficiently work-based projects, including effective planning and control. (11 Marks)

Criteria	Excellent (9–11)	Good (7–8)	Satisfactory (4–6)	Limited (0–3)
Application of Agile Concepts	Strong and accurate application of Agile methodology; all Epics, User Stories, and Tasks are clear, structured, and relevant to assigned release.	Mostly correct application of Agile structure; minor issues in story clarity or task linkage.	Some inconsistencies or incomplete story mapping; weak connection to release features.	Poor understanding; major errors or missing Agile elements.
Acceptance Criteria Quality	Each User Story includes positive and negative scenarios that are measurable, realistic, and testable; criteria clearly align with user goals.	Most stories have relevant acceptance criteria with at least one scenario clearly defined.	Some acceptance criteria are incomplete or unclear; missing one scenario type.	Acceptance criteria vague, missing, or irrelevant.
Task Breakdown & Project Planning	Comprehensive task/subtask breakdown with clear ownership and time estimates; Jira board organized and traceable.	Good breakdown with minor inconsistencies in assignment or tracking.	Limited task details; unclear ownership or missing subtasks.	Poor or missing breakdown; Jira lacks structure or control.

CLO3 (A4) – Demonstrate rapport, interact and work effectively with others to accomplish work-based project. (4 Marks)

Criteria	Excellent (4)	Good (3)	Satisfactory (2)	Limited (0–1)
Team Collaboration & Communication	Clear evidence of active collaboration; all members contribute (1 Epic, 2 Stories each); reflection demonstrates shared responsibility and decision-making.	Good teamwork with visible collaboration and communication.	Some collaboration shown but uneven contribution.	Minimal or no collaboration evidence; unclear roles.
Professional Documentation	Jira board and supporting materials are complete, organized, and visually clear.	Documentation clear with minor errors.	Basic or minimal documentation.	Disorganized or missing documentation.

Due submissions
