Assignment 2 (A2) – Product Backlog Creation with MoSCoW Classification & Dependencies

Project Background
Based on the user stories created in Assignment 1, students must complete the following tasks for A2.

Task Instructions, A2.1 – Product Backlog in PM Tool (5 marks)
Each group is required to:

- Organise all user stories into a structured Product Backlog inside the PM tool.
- Apply MoSCoW classification (Must/Should/Could/Won't) to each item.
- Define dependencies between user stories with clear technical or logical justification.
- Ensure all backlog items, priority tags, and dependencies are clearly recorded and visible in the PM tool.

Task Instructions, A2.2 – Recorded 1 Daily Standup Session: MoSCoW Prioritisation (5 marks)
Each group must record one Daily Standup discussion session (15–20 minutes) demonstrating the Solution Development Team (SDT) assigning priorities and dependencies. Everyone must open camera. The video must show:

- Discussion on determining MoSCoW priority for each user story
- Justification of priorities based on business value, risk, and project scope
- Identification of dependencies and explanation of why they exist
- Individual role performance (Project Manager, Team Leader, Business Analyst, Solution Developer & any relevant)

Expected Deliverables
- User Stories that have been assigned with MoSCoW and dependencies created in PM Tool
- Recorded video of 1 daily standup session.

Assessment Rubric

CLO2 (C4) – Classify proficiently work-based projects, including effective planning and control.

A2.1 – Product Backlog in PM Tool (5 Marks)

Criteria	Excellent (4–5)	Good (3)	Satisfactory (2)	Limited (1)
Backlog Structure & Completeness	All user stories are organised clearly with complete details.	Most stories are organised; minor details missing.	Some stories are incomplete or poorly arranged.	Backlog unclear, incomplete, or not aligned with A1.
MoSCoW Classification Accuracy	All items are correctly prioritised with strong justification.	Mostly accurate priorities with acceptable justification.	Some misclassifications or weak justification.	Priorities incorrect, missing, or unjustified.
Dependencies Identification & Justification	All dependencies are accurate with clear reasoning.	Most dependencies correct with reasonable explanation.	Few dependencies identified; justification unclear.	Dependencies missing, incorrect, or unjustified.

A2.1 – Recorded Daily Standup Session: MoSCoW Prioritisation (5 Marks)

Criteria	Excellent (4–5)	Good (3)	Satisfactory (2)	Limited (1)
MoSCoW Prioritisation Discussion	Individual roles contribute clearly and collaboratively.	Roles contribute well; minor gaps.	Limited participation or shallow discussion.	Minimal or unclear role involvement.
Justification of Priorities & Dependencies	Strong justifications based on value, risk, and scope.	Mostly correct justification with minor gaps.	Weak or incomplete justification.	No meaningful justification.
Individual Role Performance	Roles performed clearly and correctly following Scrum practice.	Most roles performed adequately.	Roles unclear or uneven.	Roles not demonstrated or performed incorrectly.
