FACULTY OF COMPUTING
UTM Johor Bahru

Semester I 2025/2026

Subject : Data Structure and Algorithms (SCSE2103)
Task : **Mini Project (3-4 Members)**
Due : 18 January 2025 (11.45PM)
(submit in E-Learning(zip)- .cpp files and report in PDF, presentation f2f during class)

OBJECTIVES

1. Construct or develop a program by applying a number of data structure concepts in C++ programming language.
2. Solve problem in group which the group are required to prepare report to document the project output and present the output.

INSTRUCTIONS

1. The program must be developed based on the given data structure concepts and must implement queue.
2. The specified concepts are the minimum concept for each groups, you can add more data structure concepts.
3. You can use the existing program and approach that you have for assignments 1 and 2.

MARKS DISTRIBUTION

1. **Project Report (25 Marks)**
    a. Problem analysis (10 Marks)
    b. Class Design (8 Marks)
    c. Flowchart (7 Marks)
2. **Presentation and Demo (25 Marks)**
    a. Use power point slide for the presentation-describe the data structure and the system being developed. (8 Marks)
    b. Describe flow of the system. (7 Marks)
    c. Presentation skill and collaboration in group work. (10 Marks)
3. **Source Code (25 Marks)**
4. **Program Prototype (25 Marks)**
