INTRODUCTION

As members of Linux, we are excited to present our very first project for the Network Communication course. The objective of this project is to design a basic yet functional network for a newly proposed two-storey building within the Faculty of Computing. This facility will host several key spaces, including computer labs, a video conferencing room, and a student lounge, each with its own set of technical requirements.

Our main task is to develop a simple and efficient floor plan that addresses the networking needs of the building. We aim to ensure that the network layout is cost-efficient, easy to maintain, and adaptable for future expansion. Throughout the project, we will pay close attention to designing a solid network infrastructure that aligns with the faculty's operational goals while prioritizing security and performance.

The success of this project will largely depend on our ability to collaborate effectively as a team and to deliver a clear and functional design. By combining technical knowledge with good teamwork, we hope to produce a reliable network plan that fulfills the current demands and anticipates future needs.

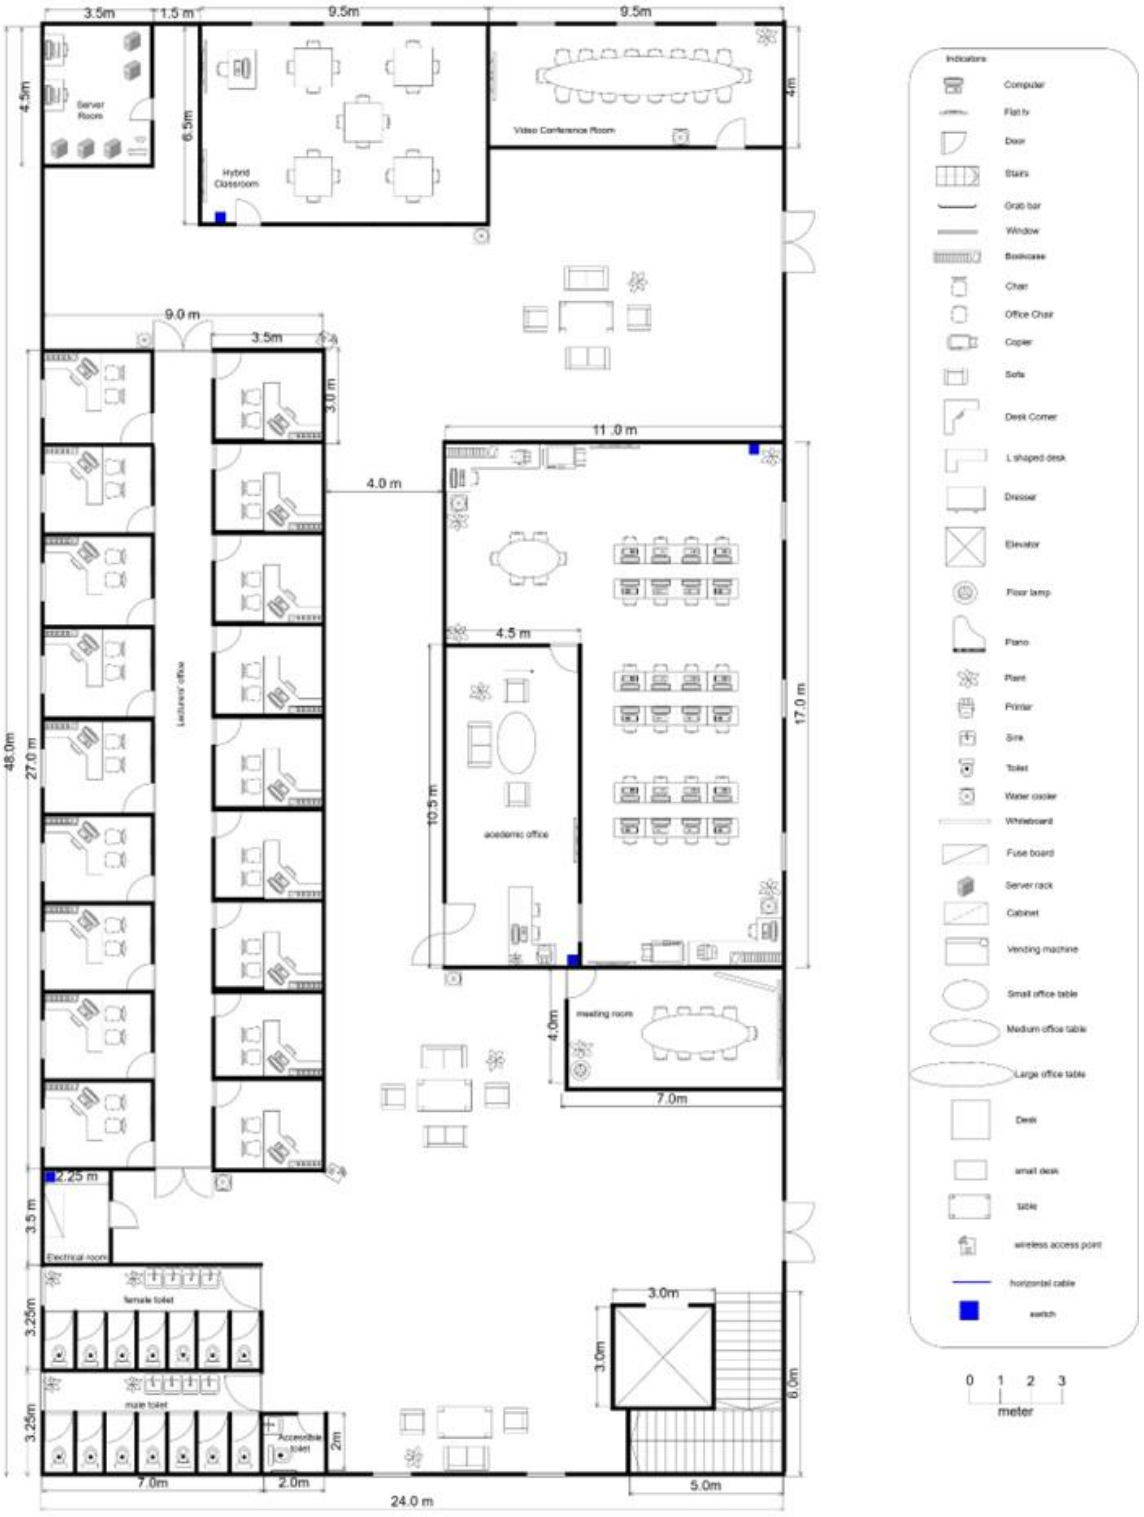

- **Explanation for the Floor Design:**

This is the newly designed Faculty of Computing building provides a modern and innovative learning space, built to accommodate a growing number of students and staff. It includes various essential facilities such as the academic office, faculty offices, server room, video conferencing room, four academic labs, a hybrid learning classroom, and a student lounge.

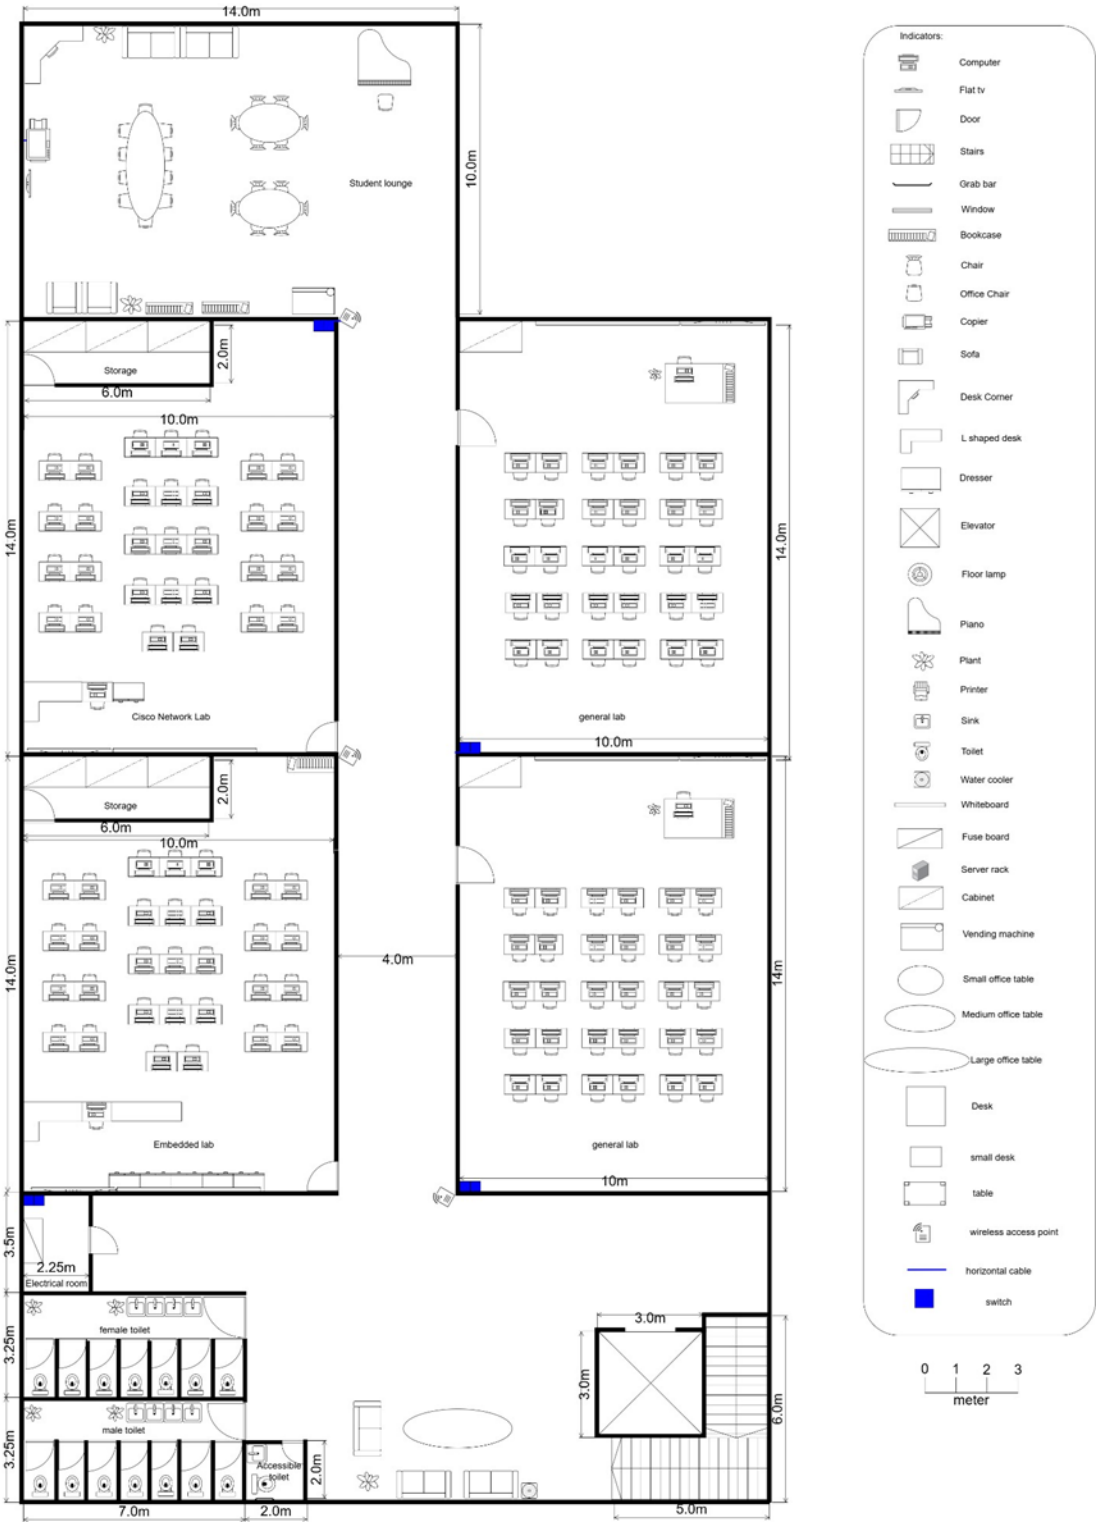

The **ground floor** is mainly designed to support the needs of faculty members and hybrid learning. From the upper entrance, one can immediately access the video conference room on the right side, followed by the hybrid learning space just a short distance further along the same side. Walking straight down the main hallway from this entrance, the server room can be found at the far end, accessible by taking a right turn. On the left side of this corridor, there is an entrance leading to the lecturers' offices. For those entering from the lower entrance, the staircase and elevator are located directly to the left. Continuing straight and turning right brings you to the academic office, while the toilets are situated further down the same corridor. Another convenient entry point to the faculty offices is also available nearby. Additionally, seating areas are placed near both entrances to provide comfort for staff and students while waiting.

The **first floor** focuses on academic laboratories and student facilities. Upon reaching the top of the stairs, the toilets are directly in front. Turning right and following the hallway leads to the lab areas. Two general-purpose labs are positioned on the right side, while the Cisco Network Lab and the Embedded Systems Lab are located on the left. These labs are equipped with specialized areas for technical equipment, and each lab contains 30 individual workstations. At the very end of the corridor is the student lounge, designed to be a relaxing area with seating, bookshelves, and even a piano for students to use. A copier machine is also available beside the lounge for students' convenience.

Meeting minutes

DATE	12 April 2025 1600H
LOCATION	N28
AGENDA	1. Discussion of project task 1 2. Task distribution for each member 3. Discussion of group name
MEETING MC	Lee Tung Ern

ATTENDANCE

Name	Time	Reason for absent
LEE TUNG ERN	1600H	-
GARRAH THABIT	1600H	-
MOHAMMED ABDELRAHIM	1600H	-
MOHAMMED ALSAKKAF	1600H	-

MINUTES

No	Item discuss	Idea / suggestion	Person in charge
1.	Group name	Group name decided to be “Linux”.	Mohammed Abdlerahim, Garrah Thabit
2.	Tool or software use to design the floor plan	Website “Draw io” decided to be used after discussion.	Garrah Thabit, Mohammed Abdlerahim, Lee Tung Ern
3.	Floor plan design	Tung Ern and Garrah designed the floor plan. Tung Ern volunteered to draw for the ground floor. Alsakkaf volunteered to draw for the first floor.	Lee Tung Ern, Mohammed Alsakkaf, Garrah Thabit
4.	Directory of floor	Tung Ern and Alsakkaf volunteered to complete the directory of floor.	Lee Tung Ern, Mohammed Alsakkaf
5.	Next meeting	14/14 - to gather everything	
	Meeting ended	6:00 pm	

Projected Marks

TASK 1		
ITEM	**MARKS**	**EXPECTED MARKS**
Group name and Members		
Suggested floor plan.		
Fit description – as per case study provided.		
A total 30 workstations and other equipment planned for each lab		
Scale: with scale		
Clear and readable. Has appropriate labels		

Creativity		
TOTAL
