Introduction

This task is part of a group project where we apply what we learned in class to a real-life network design situation. The main goal of this task is to form a group, understand the case study, and design a suitable building floor plan that can support a network system. Working in a group helps us share ideas, divide tasks, and complete the work more effectively.

First, our group carefully read and discussed the case study to understand the customer's needs. This is important because the floor plan and network design must match the requirements given. After that, we planned and created a building layout that includes different rooms and areas, such as offices and workspaces. We also made sure the design is clear and suitable for future network installation.

We used software to draw the floor plan so that it looks neat, accurate, and easy to understand. Each group member was given specific tasks, and we worked together by discussing ideas and making decisions as a team. We also recorded our meeting discussions and planned our work based on the given guidelines.

Overall, this task helps us improve our teamwork, planning, and basic network design skills, which are important for future tasks and real-world projects.

Floor Plan Description

1- What is the building

The new Faculty of Computing (FC) building is a two-storey facility designed to accommodate the faculty's projected 15% growth in students and academic staff over the next four years. The building is dedicated to supporting modern, technology-driven education aligned with the 4th Industrial Revolution (4IR).

2- Number of rooms

Room type	Quantity
General Purpose Labs	2
Cisco Network Lab	1
Embedded Lab	1
Video Conferencing Room	1
Hybrid Classroom	1
Student Lounge	1
Server Room	1

3- Important Areas

Area	reason
Cisco Network Lab	General computing and programming classes
Embedded Lab	Supports in-person and online teaching
General Purpose Lab	General computing and programming classes
Hybrid Classroom	Supports in-person and online teaching
Video Conferencing Room	Virtual project meetings and remote collaboration
Student Lounge	Student relaxation and study with WiFi
Server Room	House network equipment (switches, routers, patch panels)

4- Design

We designed the building as a two-storey facility. Floor 1 contains General Purpose Lab 1, General Purpose Lab 2, Cisco Network Lab, and Server Room. Floor 2 contains Embedded Lab, Hybrid Classroom, Video Conferencing Room, and Student Lounge. A central hallway connects all rooms on both floors. Each big square on the plan equals 2 meters, and each lab and student lounge measures 14m × 10m to fit 30 workstations per lab. We placed the Server Room on Floor 1 as the central MDF for easy cable distribution. The Student Lounge is on Floor 2 to separate relaxation from high-traffic lab areas. Labs use wired Ethernet, while the lounge uses WiFi.

Meating Minutes

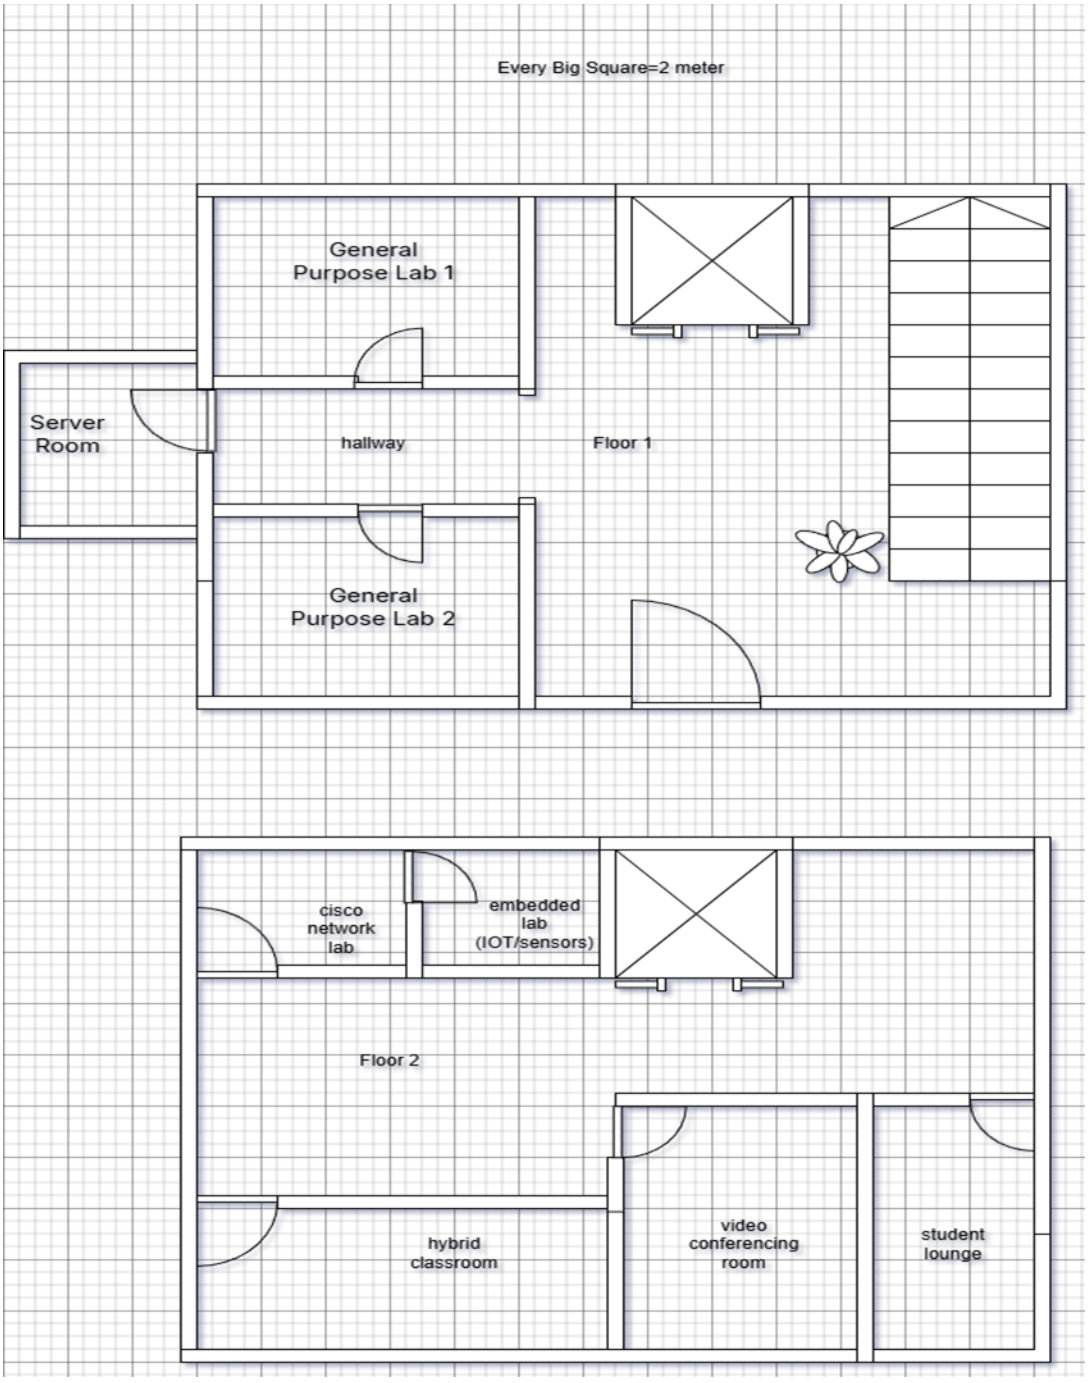

Meeting 1

- **Date:** 1 April 2026
- **Time:** 4:00 PM
- **Location:** N28, Faculty of Computing
- **Discussion:**
    - Formed the group
    - Discussed the case study
    - Planned the floor layout

Meeting 2

- **Date:** 4 April 2026
- **Time:** 4:00 PM
- **Location:** Online
- **Discussion:**
    - Reviewed the floor plan
    - Made improvements to the design

Proposed Floor Plans

Project Marks

Team	Marks
Group name and members	
Suggested floor plan.	
Fit description – as per case study provided.	
A total 30 workstations and other equipment planned for each lab	
Scale: with scale	
Clear and readable. Has appropriate labels	
Creativity	
TOTAL
