Task overview:

In order to keep up with the ever evolving technology, The Faculty of Computing at UTM is planning to erect a new building to support the needs of both their staff and students, who are anticipated to grow in size by 15%. Those plans include:

4 computer labs
1 video conferencing room
1 hybrid classroom
1 student lounge

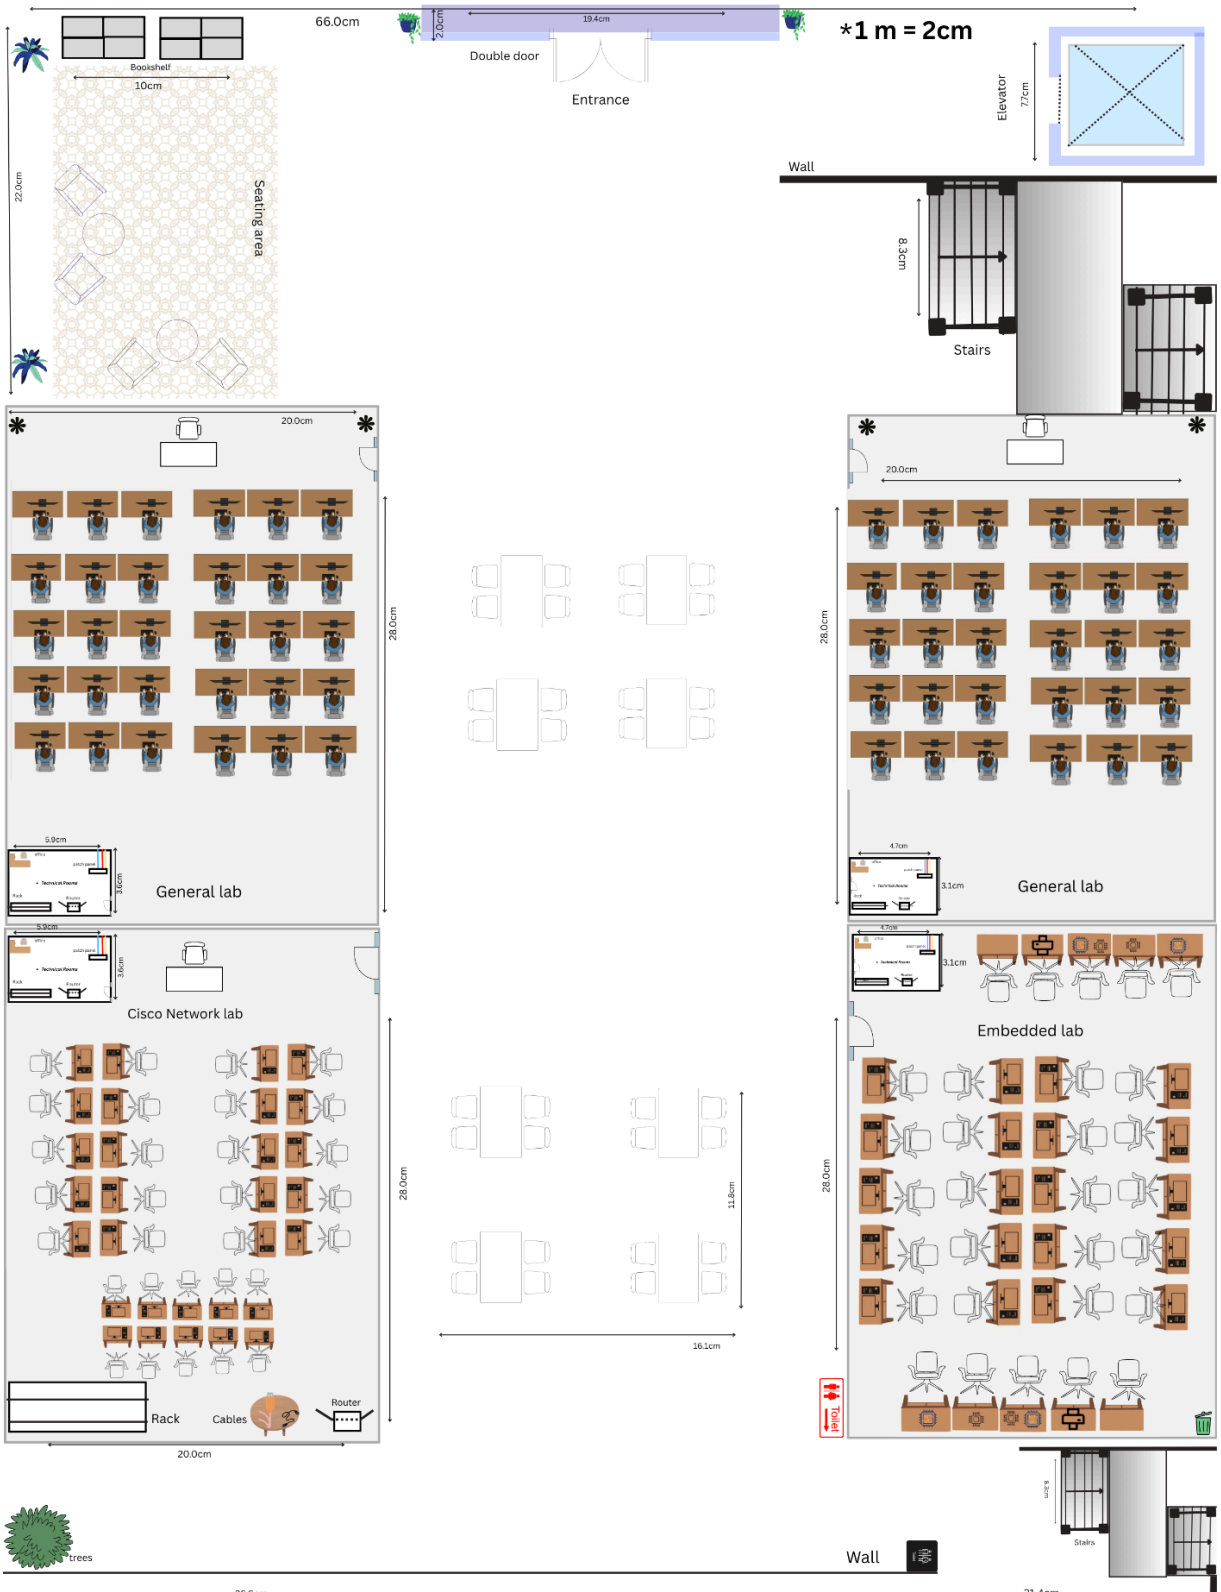

All of which will be scaled at 14x10 meters. The labs will be large enough to accommodate 30 users each, and will also offer a variety of tools and equipment, with two of them being general purpose, one Cisco Network lab, and the last one being an embedded lab.

Meetings and planning:

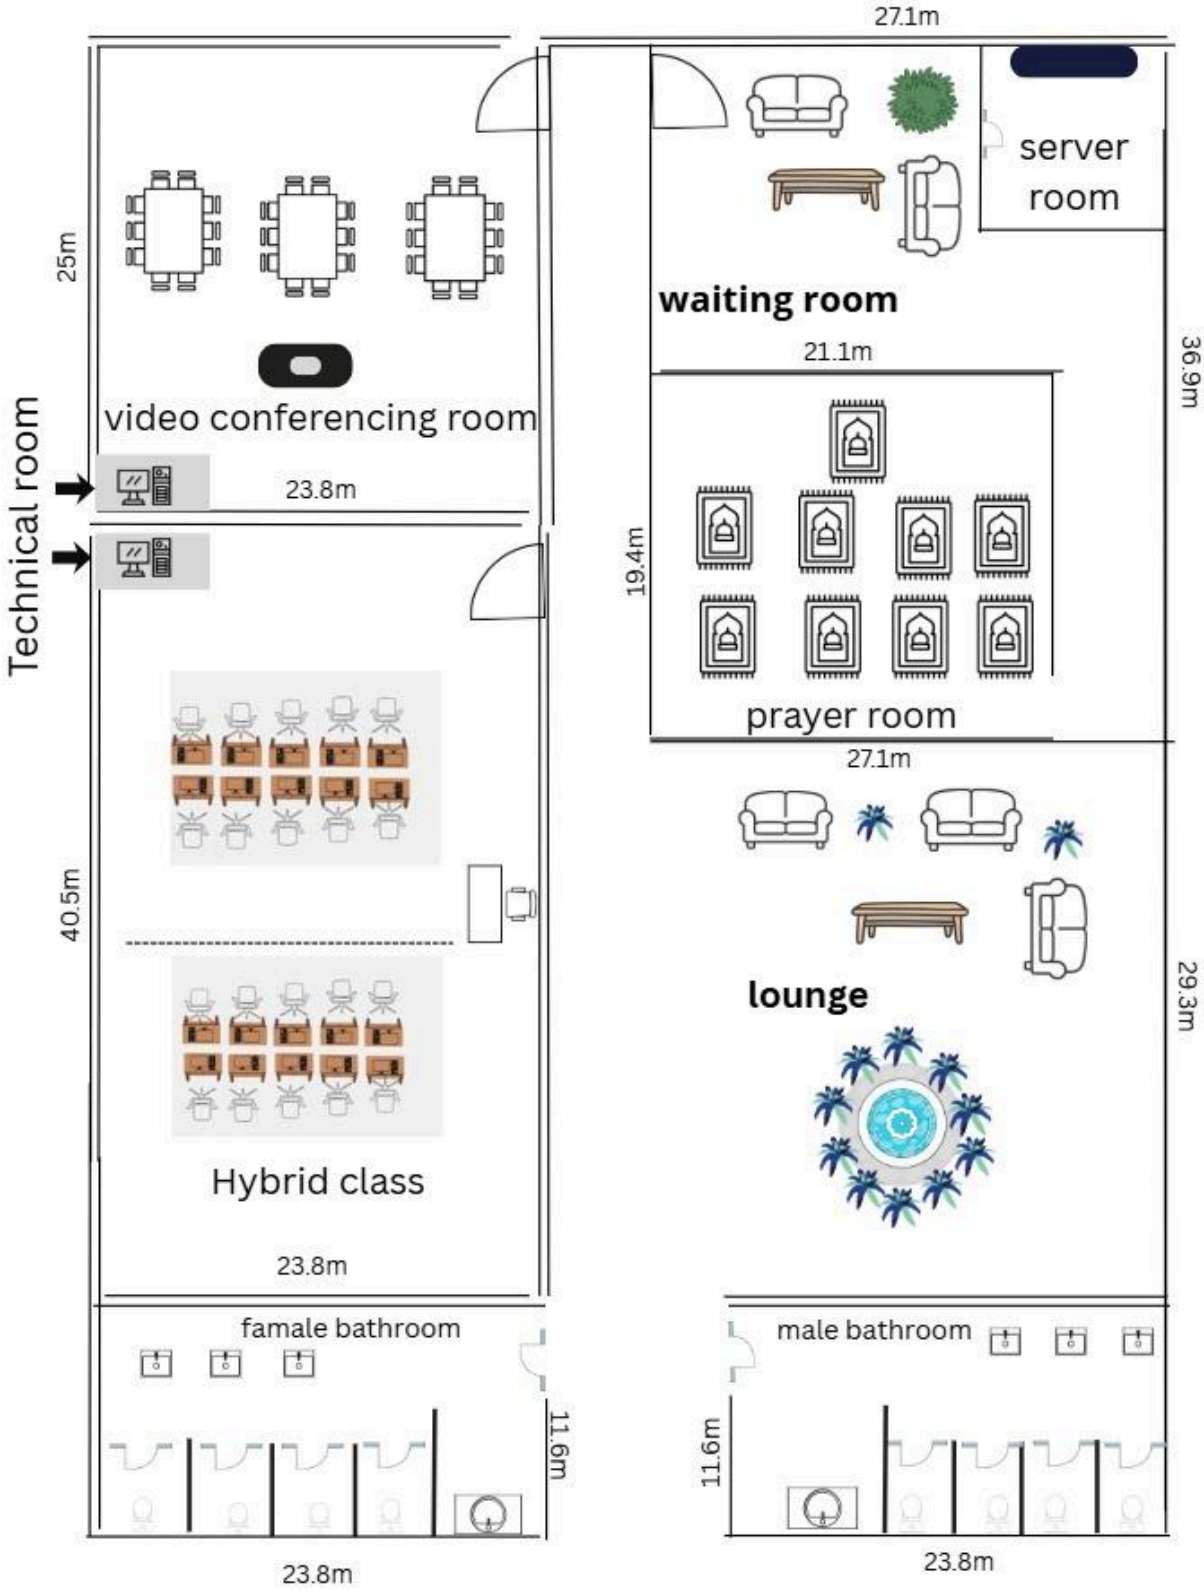

Considering the ongoing conflict in the Middle East and the different timezones, it was difficult to hold virtual meetings in a way that could accommodate everyone involved. Thus, the team found that text messages (specifically using Whatsapp) proved to be a more flexible alternative, where, over the course of a week, each member could share images and files to document their individual progress at the times that worked for them. The team will explore more options for communications (such as video calls) in the future.

The floor plan:

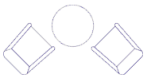

- Ground floor:

First floor:

27.1m
server room
waiting room
25m
video conferencing room
Technical room
23.8m
21.1m
36.9m
19.4m
prayer room
27.1m
40.5m
lounge
29.3m
Hybrid class
23.8m
famale bathroom
male bathroom
11.6m
11.6m
23.8m

Design Legend:

 Bookshelves	 Elevator	 Seating Area	 Potted Plant	 Potted Plant
Seating area	 Desk	 Chair	 Lecturer Desk	 Router
 Storage Rack	 Shrub	 Bathroom sink	 Toilet	 Waste bin
 Confrence table	 Large Monitor	 Coffee Table	 Couch	 Fountain

Design overview:

The ground floor is designed to optimize efficiency, a space that provides the tools and equipment needed to create a smooth working and learning environment. It is a high-traffic technical core, designed to handle large groups of students and specific hardware-intensive coursework. It utilizes a central spine layout that allows for easy navigation between the entrance and the labs, while still providing a small space for relaxation.

The first floor, on the other hand, shifts from the ground floor's focus on hardware and technical labs toward collaboration, administration, and wellness. It is designed to be a more comfortable, "human-centric" space where students and staff members can interact more directly with each other, while still providing high-tech learning environments.

Overall, this facility is a multi-purpose educational and technical center organized across two distinct levels. The layout prioritizes high-density learning environments, specialized technical laboratories, and comprehensive amenities for students and staff.
