Exercise #1 - UML Revisited
(Work in Pair)

SCSJ 3323 - Software Architecture & Design

Name : 1. _____

2. _____

Car Rental System (CRS)

As a software engineering Team leader, you are tasked with developing a new Car Rental System. The new system should be implemented as a web-based applicaton that allows visitors to register as customers and make a vehicle booking. Customers may select the type of vehicle (e.g. saloon, MPV, etc.) and specify the pick-up and return date. The system will search for the available vehicle from the existing schedule. If the vehicle is available, the system will update the schedule and inform the customer.

Apart from vehicle booking, CRS should also allow the staff to record the pickup and return of the booked vehicle, including the early and late return.

Instructions:

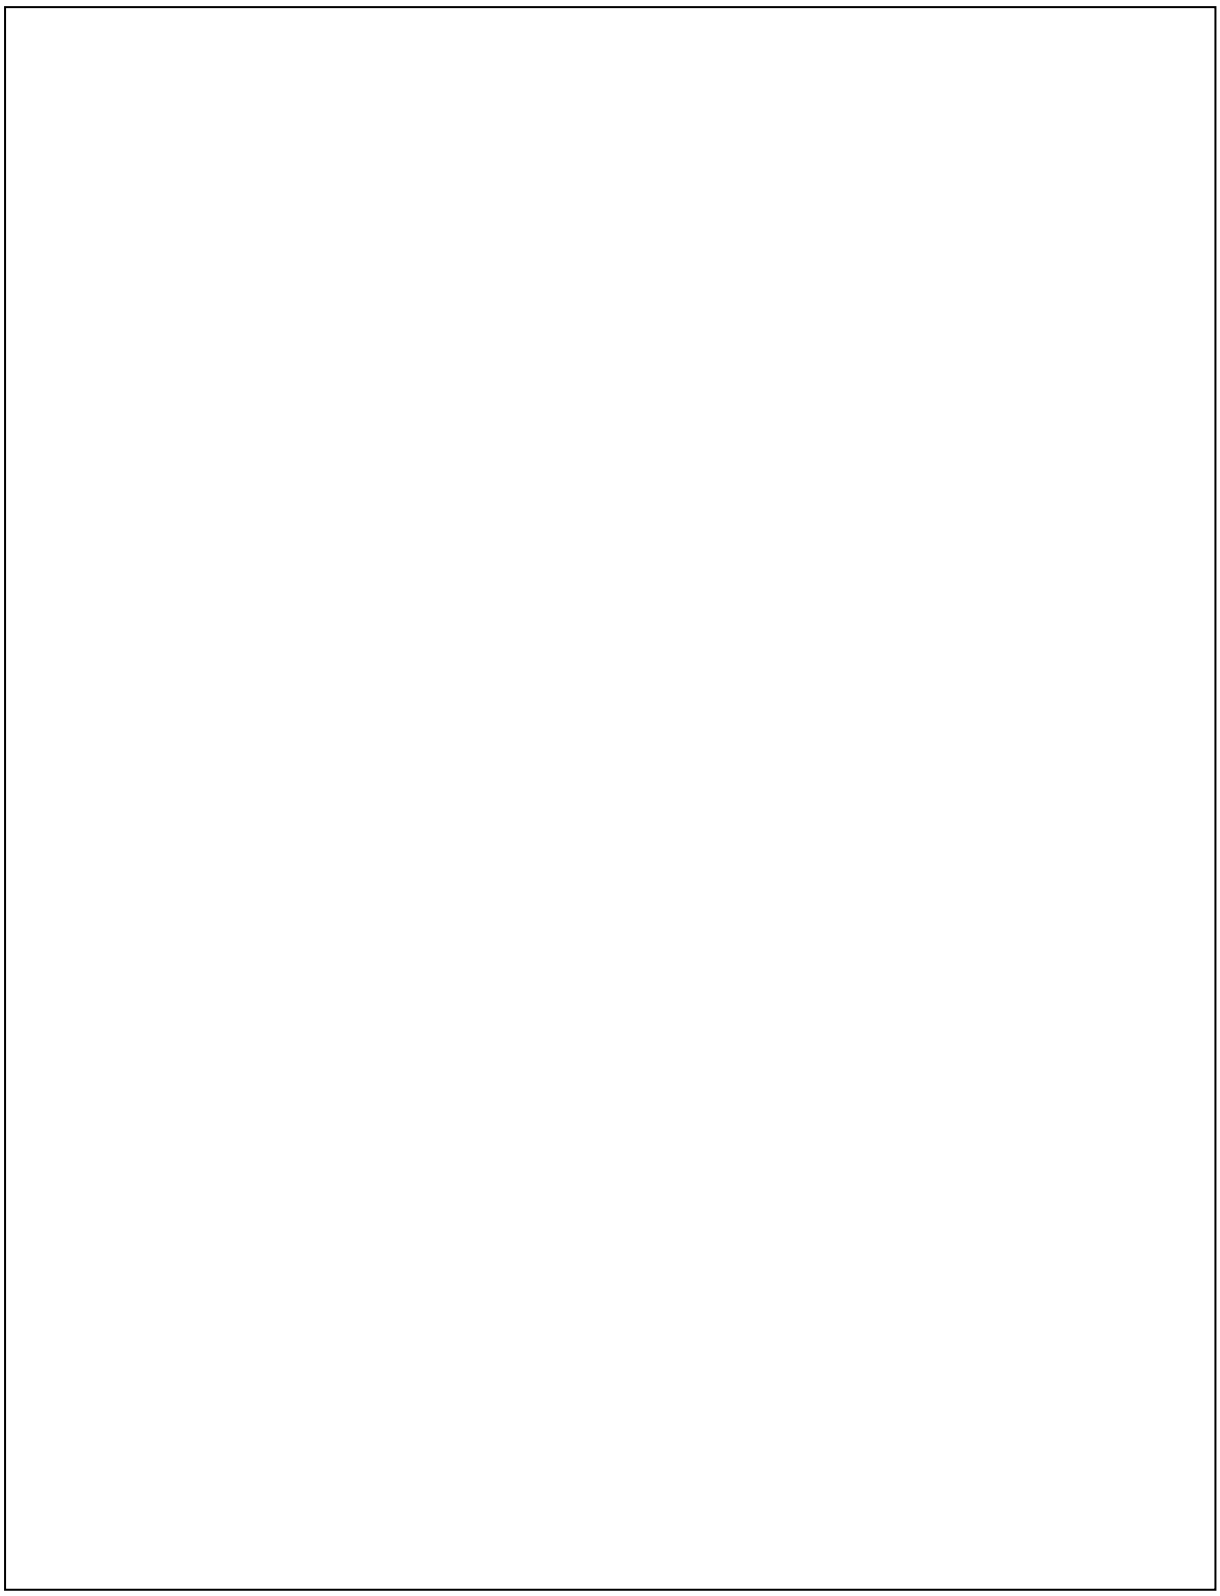

1. Draw a use case diagram.

2. Write the normal flow (happy day scenario) for the Make A Booking use case.

3. Write a sequence diagram for the normal flow (in 2).

Answer:

1. Use Case Diagram

2. Normal flow (happy day scenario) for the Make A Booking use case.

3. Sequence Diagram for the Normal Flow in question (2).
