FACULTY OF COMPUTING

Semester 01 Session 2024/2025

Subject : SCST1143 Database Engineering
Section : 01
Task : Phase 1 (P1) – Project Proposal & Database Requirement (5%)
Due : WEEK 4 (31 October 2024)

P1 Guidelines

No	Task	Deliverables (Items in Proposal)
1.	Conduct problem background ● Organizational background study ● Benefits from the systems/contribution	● Overview of project ● Problem Statement ● Proposed Solutions ● Objectives ● Scope
2.	System boundaries ● What will be included ● What will not be included	● Boundaries of database application ● Major user views
3.	Project Plan ● Tasks to do ● Who will produce it ● A deadline (expected completion date)	
4.	Gather more details on the user views by describing in detail the data CURRENTLY held in the database and how they are used.	A report containing the following: ● Current OR proposed business rule (based on Current Business Process/Workflow) ● Data requirements for each information that is stored in the database.
5.	Gather general requirements for the database system by describing any CURRENT features included in the database system (e.g.: performance requirements, levels of security required).	
6.	Describe how to manage user views of the CURRENT database system.	

P1 Proposal Item

Prepare a proposal with the items below:

1.0 Introduction
2.0 Background Study
3.0 Problem Statement
4.0 Proposed Solutions
5.0 Objectives
6.0 Scope
7.0 Project Planning
8.0 Requirement Analysis (based on AS-IS system from Scopes)
9.0 Summary

P1 Rubrics

1. Project Proposal

Criteria	High (4)	Average (3)	Low (2)	Unsatisfied (1)
Explains Issues and Clear Content Organization	**CLEARLY** identifies and summarizes main issues and successfully explains why/how they are problems or questions; and identifies embedded or implicit issues, addressing their relationship	**SUCCESSFULLY** identifies and summarizes the main issues, but does not explain why/how they are problems or create questions.	**IDENTIFIES** main issues but does not summarize or explain them clearly or sufficiently	**FAILS** to identify, summarize, or explain the main problem or questions. Represents the issues inaccurately or inappropriately.
	The method of an organization is **WELL-SUITED** to the assignment; clear intro, body, and conclusion with effective transitions.	Organization **SUPPORTS** assignment and purpose; sequence of ideas could be improved.	**SOME SIGNS** of logical organization. May have abrupt or illogical shifts and ineffective flows of ideas	**POORLY** organized OR demonstrates serious problems with the progression of ideas; a written form of speech
Content Development & Writing	Content is somewhat **ACCURATE AND CLEAR**; offers **SOLID AND ACCURATE** reasoning; contains appropriate details and/or examples.	Content is somewhat **ACCURATE AND FAIRLY CLEAR**; offers **SOLID BUT LESS ACCURATE** reasoning; contains some appropriate details and/or examples.	Content is somewhat **VAGUE** OR only **LOOSELY RELATED** to the writing task; at times may be **OFF TOPIC** OR **TOO BROAD** with limited support.	Content **UNCLEAR; LAPSES IN COHERENCE** OR **NO RELATION** to writing task; offers simplistic, undeveloped support for ideas.

Criteria	High (4)	Average (3)	Low (2)	Unsatisfied (1)
	Written works have **NO MAJOR ERRORS** in word selection and use, sentence structure, spelling, punctuation, and capitalization.	Written works are **RELATIVELY FREE OF ERRORS** in word selection and use, sentence structure, spelling, punctuation, and capitalization.	Written work has **SEVERAL MAJOR ERRORS** in word selection and use, sentence structure, spelling, punctuation, and capitalization.	Written work has **SERIOUS AND PERSISTENT ERRORS** in word selection and use, sentence structure, spelling, punctuation, and capitalization.
Complete System Boundaries	**A COMPLETE** description of the scope and boundaries of the database application and the major user views. Able to **ACCURATELY** identify all user views for the proposed database application.	**PARTIAL** description of the scope and boundaries of the database application and the major user views. Able to identify all user views for the proposed database application with **MINIMAL ERRORS.**	**MINIMAL** description of the scope and boundaries of the database application and the major user views. Able to identify all user views for the proposed database application with **MAJOR ERRORS**.	**NO** description of the scope and boundaries of the database application and the major user views. **UNABLE** to identify all user views for the proposed database application.
Complete Project Plan	Complete, precise, and clear task description. Time allocation for each task is **HIGHLY ACCEPTABLE**.	The task description is **FAIRLY COMPLETE AND CLEAR**. Time allocation for each task is **ACCEPTABLE**.	The task description is vague and unclear. Time allocation for each task is **FAIRLY ACCEPTABLE**.	Unclear and incomplete task description. Time allocation for each task is **UNLOGIC** and **UNACCEPTABLE**.

2. Database Requirements

Criteria	High (4)	Average (3)	Low (2)	Unsatisfied (1)
Identify the database requirement based on the case study.	Correctly interpreted **ALL** business rules with a **CLEAR** idea of the entity, attribute, and relationship.	Correctly interpreted **MOST** of the business rules with **GOOD** ideas on the entity, attribute, and relationship.	**INACCURATELY** interpreted the business rules with **WRONG** ideas on the entity, attribute, and relationship.	**UNABLE** to interpret the business rules with **NO IDEA** entity, attribute, and relationship.
Produce data requirements for information stored.	**ACCURATE** use of names in entities, attributes, relationships, and user view – **ALL** data types are appropriately used regarding their requirements.	Some **MINOR** errors in the use of names in entities, attributes, relationships, and user view – **FEW** data types are not clear/suitable with its requirement.	**INACCURATE** use of names in entities, attributes, relationships, and user view – the data type **DID NOT** correlate with its requirement.	**WRONG** use of names in entities, attributes, relationships, and user view. Shows **NO** understanding in identifying the data type used regarding its requirement.
Produce a set of transaction requirements for the current/manual system based on the case study.	**GOOD** understanding of the business rules and ability to produce an **ACCURATE** and **SUITABLE** set of transaction requirements.	**PARTIAL** understanding of the business rules and having **MINIMAL ERROR** in producing a set of transaction requirements.	**INCORRECTLY** understand the business rules and produce an INACCURATE set of transaction requirements.	**FAIL** to understand the business rule and produce a **WRONG** set of transaction requirements.
